ACKNOWLEDGEMENTS

The 2012 Palm Beach County Community Health Assessment is a result of the effort, participation and contribution of a wide spectrum of health and human service organizations that came together around the commitment to improve and enhance services for the betterment of the entire Palm Beach County community.

Health Council of Southeast Florida wishes to extend our appreciation and thanks to all the organizations that participated and contributed to this comprehensive body of work, as well as for their commitment and collective efforts to improve access to health care on behalf of the residents of Palm Beach. Their insight was essential to identifying health care priorities, populations and topics of the assessment. Special recognition is due to the Palm Beach County Community Health Improvement Plan (CHIP) Advisory Council whose ongoing input and participation in this assessment and planning process will enable data-driven priorities to be identified, and solid action plans to be developed and implemented in an effort to reach the overarching goal of improving access and the quality of health care in our community.

CHIP Council Participating Organizations:

Bethesda Memorial Hospital	Judy Goodman, P.A
C.L. Brumback Health Center Governing Board	Palm Beach County
Caridad Center	Palm Beach County Health Department
Children's Services Council of Palm Beach County	Palm Beach County League of Cities, Inc.
Citizens for Improved Transit	Palm Beach County Medical Society
Delray Medical Center	Palm Tran
Families First	School District of Palm Beach County
Florida Community Health Centers, Inc.	St. Mary's Medical Center
Genesis Community Health	Workforce Alliance
Health Care District of Palm Beach County	Your Aging Resource Center

We are grateful to the Palm Beach County Health Department for the assistance, guidance and funding support for this process. We'd like to give a special thank you to the Quantum Foundation, Inc. for use of their venue. We'd also like to recognize and thank: Adopt-a-Family, the Bridges at Belle Glade, Delray Health Center, El Sol Community Resource Center, St. George's Community Center and Villa Regina for their assistance coordinating and recruiting participants for the assessment's focus groups. Finally, we'd like to express our appreciation for all the individuals and organizations who gave their valuable time and insight to the process by participating in the Local Public Health System Assessment and the Provider Stakeholder Survey.

EXECUTIVE SUMMARY

A community health assessment is a systematic method of identifying unmet health care and human service needs of a population and identifying possible interventions to meet those needs. In 2012 the Palm Beach County Health Department engaged the Health Council of Southeast Florida to facilitate a comprehensive, county-wide health assessment for Palm Beach County.

This community health assessment provided the opportunity to:

- Assess the population's health status
- Highlight areas of unmet need
- Present the community's perspectives
- Provide suggestions for possible interventions
- Highlight recommendations that policymakers might consider when setting new policy goals and objectives for health improvement activities

The report includes secondary data from national, state and local databases and when appropriate and possible, comparative information is presented. It also includes primary data that encompasses the community's perspective.

The assessment is organized into four sections:

1. Demographic and Socioeconomic Profile
2. Health Status Profile
3. Health Resource Access and Availability Profile
4. Local Public Health System Assessment

Demographic and Socioeconomic Profile

This section provides information on a number of key demographic, social and economic indicators, such as population, presented by various cohorts, e.g., age bands, gender and race, income, estimates of poverty, educational attainment, employment, housing and transportation.

Key findings include:

- Residents of the county account for 7.02% of Florida's total population
- One quarter of the residents in Palm Beach county are 62 years or older
- 73.5% of the population identifies as White and 17.3% as Black or African American
- 19% of the population identifies as Hispanic
- Just over 14% of the population in the county is at or below the poverty level

- The county's per capita income is \$31,696, considerably higher than Florida's per capita income of \$25,187
- The per capita income for White individuals in the county was more than double the per capita income for Black or African American individuals in the county and was nearly 60% lower among Hispanic or Latino individuals than 'White alone, not Hispanic or Latino' individuals
- The high school graduation rate for the 2010/11 school year was 79.8%
- Unemployment in the county is 8.8%, slightly above the state rate of 8.6% and national rate of 8.4%
- The largest industry in the county is 'educational services, and health care and social assistance'

Health Status Profile

This section profiles the health status of the community and includes data on various indicators of maternal and child health (such as prenatal care access, birth rates, infant mortality, child immunization rates); behavioral health (including domestic violence, alcohol consumption, and violence and injury); hospital utilization data; and morbidity and mortality trends as reflected by data on chronic diseases, infectious diseases, and leading causes of death.

Key Findings include:

Maternal & Child Health Indicators:

- 73.3% of births are to mothers with 1st trimester prenatal care
- The birth rate in the county is 10.7 per 1,000
- The rate of repeat births to mothers in the 15-17 age group was slightly higher in Palm Beach (10.9%) than in Florida (9.0%).
- The rate of low birth weight births in the county is 8.9 %, compared to 8.7% in Florida and the Healthy People 2020 target of 7.8%
- Infant mortality is lower in White individuals (4.7 per 1,000) than in Black or other races (7.2 per 1,000)
- Kindergarten immunization levels were 90.8% in 2010

Behavioral Health Indicators:

- 18.5% of high school students reported being drunk or high at school within the past 12 months
- Nearly a quarter of students reported bullying caused worry
- 90.6% of adults in the county reported 'good mental health'
- Over 20% of males in the county report engaging in heavy or binge drinking
- 36.6% of students reported consumption of 'alcohol or any illicit drug' in the past 30 days
- The suicide rate in the county was 13.8 per 100,000, similar to the rate in Florida (13.6 per 100,000)

Morbidity and Mortality Indicators:

- The rate of new cancer cases in the county is 467.2 per 100,000, slightly higher than the rate in Florida (455.8 per 100,000)
- The age-adjusted breast cancer incidence rate in 2008 in the county was 126.2 per 100,000, compared to Florida's rate of 113.5 per 100,000
- The age-adjusted melanoma incidence rate in 2008 was 23.8 per 100,000 compared to Florida rate of 18.1 per 100,000
- 11.6% of Black high school students in the county are obese, compared with 9.7% of Hispanic students, and 7.5% of White non-Hispanic students
- 61.3% of adults in the county are overweight or obese
- The tuberculosis case rate in the county was 5.4 per 100,00 in 2010, compared to Florida's rate of 4.4
- There were 314 new HIV cases in the county in 2010
- Heart disease is the leading cause of death in the county (26.4%) followed by cancer (24.1%)
- Lung cancer caused over a quarter of deaths due to cancer in 2010
- In 2010 there were 568 deaths due to unintentional injuries in Palm Beach County, a rate of 60.9 per 100,000 for males and 28.3 per 100,000 for females
- Poisonings were the most frequent cause of deaths due to unintentional injury

Health Resources Availability and Access Profile

Key Findings include:

- There are 115 identified primary care health professional shortage areas, 68 identified dental care health professional shortage areas and 6 identified mental health professional shortage areas in the county
- In 2010, 47.8% of persons below the poverty level in the county reported having access to dental care
- In Palm Beach County there are 316.6 licensed physicians per 100,000 residents compared to 336.3 per 100,000 in Florida
- According to the U.S. Census, 21% of the county's population is uninsured. More Black or African Americans are uninsured (33.8%) than White individuals (17.4%), and more Hispanic or Latino individuals are uninsured (38.3%) than 'White alone, not Hispanic or Latino' individuals (11.6%)

Community Perspective

The Local Public Health System Assessment Performance Instrument (LPHSPA) is one of the three assessment instruments within the Centers for Disease Control and Prevention's (CDC) National Public Health Performance Standards Program (NPHPSP). The LPHSPA instrument is based on the framework of the 10 Essential Public Health Services, each of which represents a critical area of service provision. This tool provides a context for state and local partners to evaluate their current performance against a set of optimal standards. Key findings including identified strengths, opportunities for improvement and level of public health activity are summarized for each of the Essential Services in the Community Perspective component of this Community Health Assessment. The local public health system in Palm Beach County received a composite score of 80, indicating 'optimal' activity related to the Essential Public Health Services. The county scored highest in the Essential Service "Research for New Insights and Innovative Solutions to Health Problems" and lowest in the Essential Service "Monitor Health Status to Identify Community Health Problems."

Conclusion:

Communities face the challenge of balancing the desire to provide residents access to quality health and human services in an environment of decreasing resources and increasing demand. The 2012 Palm Beach County community assessment will provide a better understanding of the needs of the community and aid in planning for services in an effort to most efficiently use resources and improve the health of residents.

The complete 2012 Palm Beach Community Health Assessment can be accessed on the Palm Beach County Health Department's website (www.pbchd.org) or on the Health Council of Southeast Florida's website (www.hcsef.org).

METHODOLOGY

At the request of the Palm Beach County Health Department, the Health Council of Southeast Florida, (HCSEF) facilitated this community health assessment process. Data presented in the first three sections of this report: Demographic and Socioeconomic Profile, Health Status Profile, and Health Resource Availability and Access Profile are comprised of secondary data. The collection of the primary data for this Community Health Assessment consisted of the Local Public Health System Assessment (LPHSA) tool, an instrument in the National Public Health Performance Standards Program (NPHPSP).

Data sources consulted for this report include, but are not limited to: The U.S. Census Bureau, the Nielsen Company- Claritas, the Florida Agency for Health Care Administration, the Florida Department of Health, the Florida Behavioral Risk Factor Surveillance System (BRFSS) Data Report, the Florida Department of Children and Families, the Centers for Disease Control and Prevention, U.S. Department of Labor Statistics, Florida Department of Education Information and Accountability Services (EIAS), Florida Department of Law Enforcement, Palm Tran, the Health Care District of Palm Beach County and the Palm Beach County Health Department.

Data was collected, analyzed and compiled for this assessment to enable and guide healthcare providers, managers, health and program planners, local health department officials, and community leaders to identify health indicators within our community that present areas of concern, gaps in care or services and opportunities for improvement. The information provided in this assessment may be used to identify opportunities to change and improve future health planning activities.

DEMOGRAPHIC AND SOCIOECONOMIC PROFILE

Palm Beach County is located in southeast Florida and is one of three counties that comprise the South Florida metropolitan area. Formed in 1909, it is the largest county in the state in area and the third largest in population. The county has a total area 2,386.33 square miles, of which 1,974.11 square miles (82.73%) is land and 412.22 square miles (17.27%) is water.

The county was named for the palm trees and beaches in the area. The county seat is located in the county's largest city, West Palm Beach. Palm Beach County borders Martin County to the North, the Atlantic Ocean to the East, Broward County to the South, Hendry County to the West, and extends into Lake Okeechobee in the Northwest, where it borders Okeechobee County and Glades County at one point in the center of the lake.¹

Figure 1: Florida Map

The demographic and socioeconomic characteristics of the residents of Palm Beach County are highlighted in this section. These characteristics provide context for the health care needs of the community and are indicators and predictors for health care utilization patterns and health outcomes. Furthermore, the demographic and socioeconomic profile of a community provides information important in the identification of barriers to accessing health care services.

<http://2010.census.gov/2010census/popmap/>

Data in this assessment is presented for Palm Beach County and in many cases, for comparison purposes, data for the state of Florida and the United States is provided. There are also instances where data for the county is presented and compared to other counties within the state. Throughout the assessment, for certain health indicators there are references to the Healthy People 2020 target, these are provided to provide a benchmark for data and to aid in goal-setting and planning activities.

DEMOGRAPHIC CHARACTERISTICS

POPULATION

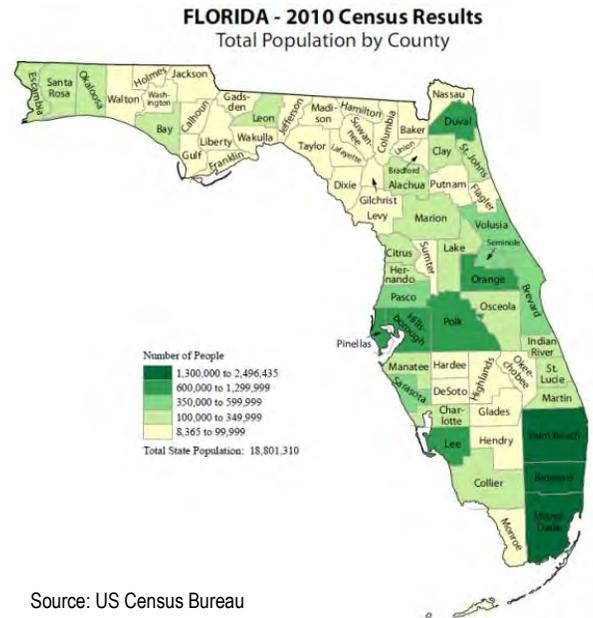

Total Population

As reflected in Table 1, the U.S. Census Bureau reported that the 2010 population of Palm Beach County was 1,320,134. The residents of the county account for 7.02% of Florida's total population of 18,801,310.

Population by Gender

Table 2 shows the gender distribution in Palm Beach and Florida. In 2010, the Palm Beach population was 48.4% males and 51.6% females.

Population by Age

Health care needs vary greatly between age groups. Understanding the age composition of an area aids in identifying needs and planning for health services. Table 3 shows the population by age group in Palm County and Florida. The median age in the county is 43.5 years, slightly higher than the median age in Florida (40.7 years). The highest proportion of the population in Palm Beach County falls in the 45-49 year range, with 7.3% of its residents in this category. Over a quarter of the population in the county is 62 years or older which is higher than Florida (20.9%). 7.5% of the county's population is 80 years or older compared to 4.9% in Florida. Figure 5 shows the population distribution graphically.

Population by Race and Ethnicity

The diversity within an area is another important consideration for health planning, as health behavior, health care utilization, and subsequently health outcomes often differ between races and ethnicities. Table 4 shows the population of Palm Beach County and the state of Florida by race and ethnicity. The percentage of individuals identifying as White is 73.5%, slightly lower than the state (75%). The percentage of individuals who identify as Black or African American is 17.3%, slightly higher than the state’s rate (16%). 19% of the population in the county identify as Hispanic or Latino, slightly lower than Florida (22.5%). Figures 4 and 5 show the population distribution by race and ethnicity graphically.

Language is often a barrier to healthcare access, particularly for individuals with limited English proficiency. Table 6 shows languages spoken in Palm Beach and in Florida. In Palm Beach 28.8% of the population reported speaking a language other than English at home. Of those speaking other languages at home, 45.7% report speaking English 'less than very well'. 16.4% of the population reports speaking Spanish or Spanish Creole at home and 10.3% reporting speaking 'Other Indo-European languages'.

Population by Municipality

The U.S. Census Bureau computes population density by dividing the total population or number of housing units within a geographic entity by the land area of that entity measured in square miles. Density is expressed as “population per square mile”. Usually, an incorporated area consists of a density of at least 1,000 persons per square mile. This is a region that is subject to taxes, has a separate police force and other powers conferred by the state. An unincorporated area of land is a region that is not part of a municipality and therefore not subject to or taxed by a municipal government.²

Table 7 shows population by municipality and population change between 2000 and 2010. Areas with greater than 33% change are highlighted, which for some areas such as Greenacres City, Jupiter, Palm Beach Gardens, Palm Springs, Royal Palm Beach and Wellington, equates to a large increase in the number of residents. There are 38 municipalities in Palm Beach County in which 55.5% of the county’s population lives. 45.5% (587,844) residents live in unincorporated areas of the county.

POPULATION PROJECTIONS / POPULATION GROWTH

Table 8 shows the population distribution by age group in the county in 2000, 2011 and projections for 2016. Though the total population is projected to increase 5.3% from 2011 to 2016, there are subgroups of the population which will increase and decrease at disproportionate rates and this can have implications for health care planning. The population age 85 and over is projected to increase 78.9% between 2000 and 2016. The age groups 21-24 and 55-64 are both projected to increase upwards of 50% between 2000 and 2016 while the 35-44 age group is projected to decrease by nearly 11%. Assessment of population projections and age distributions can help anticipate further health care needs and demand and can help inform planning activities. Figure 8 illustrates population projections by age group.

SOCIOECONOMIC CHARACTERISTICS

Socioeconomic status can influence access to care and health outcomes. The socioeconomic variables and indicators reported in this community health assessment include measures on: poverty, income levels, education, employment/unemployment status, public assistance benefits housing, transportation, uncompensated care and crime.

POVERTY

Poverty creates many difficulties for individuals, families and the communities in which they live. Poverty often hinders access to a variety of services and products including proper medical care and nutrition. There are different terms commonly used to reflect certain levels of poverty. The U.S. Census Bureau employs 'poverty thresholds' which are statistical calculations used to ascertain the number of poor persons. The Department of Health and Human Services uses 'poverty guidelines' to determine eligibility for certain programs.³

Table 9 shows the Federal Department of Health and Human Services 2012 poverty guidelines

Table 9: 2012 Poverty Guidelines for the 48 Contiguous States and the District of Columbia

Persons in family/household	Poverty guideline
1	\$11,170
2	15,130
3	19,090
4	23,050
5	27,010
6	30,970
7	34,930
8	38,890

Data Note: For families/households with more than 8 persons, add \$3,960 for each additional person.

Individuals in Poverty/ Children in Poverty

This area measures the percent of children in poverty, as defined by the federal poverty threshold. Table 11 shows the estimated counts and percentages of people in poverty in Palm Beach County, Florida and the United States in 2010. The counts and percentages of people in poverty are shown for the entire population and for the groups under age 18 and ages 5-17. The percentage of individuals in poverty in Palm Beach was 14.3%, slightly lower than the state (16.5%) and national (15.3%) percentages. In Palm Beach County, 22.4% of individuals under 18 are in poverty, a rate slightly higher than the national average (21.6%).

Families in Poverty

Table 13 shows families in poverty in Palm Beach and Florida. There was significant disparity in the percentage of families below poverty in families where the householder is White (6.9%) and families where the householder is Black or African American (24.4%). The percentage of families living in poverty was considerably greater in families 3 or more children in both Palm Beach and Florida.

Table 13: Poverty Status in the Last 12 Months, Families, 2010 Estimates

INCOME

Per Capita Income

Income and financial resources often influence health as they facilitate access to resource and services including: health insurance, medical care, healthy food, safe housing, and other basic goods.

Per capita income is calculated by adding all income in an area and dividing by the total population. While per capita income provides some indication of the financial situation in an area, it does not provide insight into the distribution of that wealth or the disparities within an area.

Table 14 shows the per capita income in Palm Beach County and Florida. In 2011, Palm Beach County's per capita income was \$31,696, nearly 26% more than Florida's per capita income of \$25,187 and over 23% higher than the per capita income in the United States. Figure 9 charts the per capita income data.

Table 14: Per Capita Income, 2011 Estimates

	Palm Beach	Florida	United States
Per Capita Income	\$31,696	\$25,187	\$25,728

Figure 9: Per Capita Income, 2011 Estimates

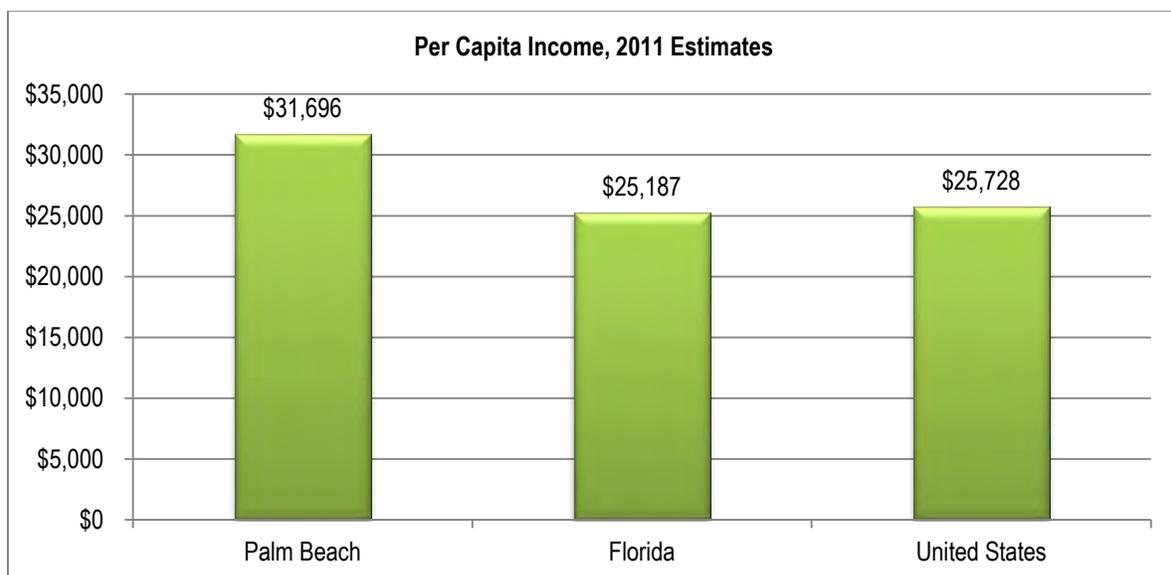

Table 15 shows per capita income in Palm Beach County by race and ethnicity using data from the American Community Survey. The per capita income of individuals identifying as White (\$34,999) was more than double that of individuals identifying as Black or African American (\$15,172). Considerable disparity in per capita income was seen between individuals of Hispanic or Latino origin (\$16,583) and 'White alone, not Hispanic or Latino' (\$40,027).

Table 15: Per Capita Income by Race and Ethnicity, Palm Beach, 2010

Median Household Income

Household income reflects the totaled amount of income of all workers within a household. A household is all people who occupy a housing unit; the occupants may or may not be related.

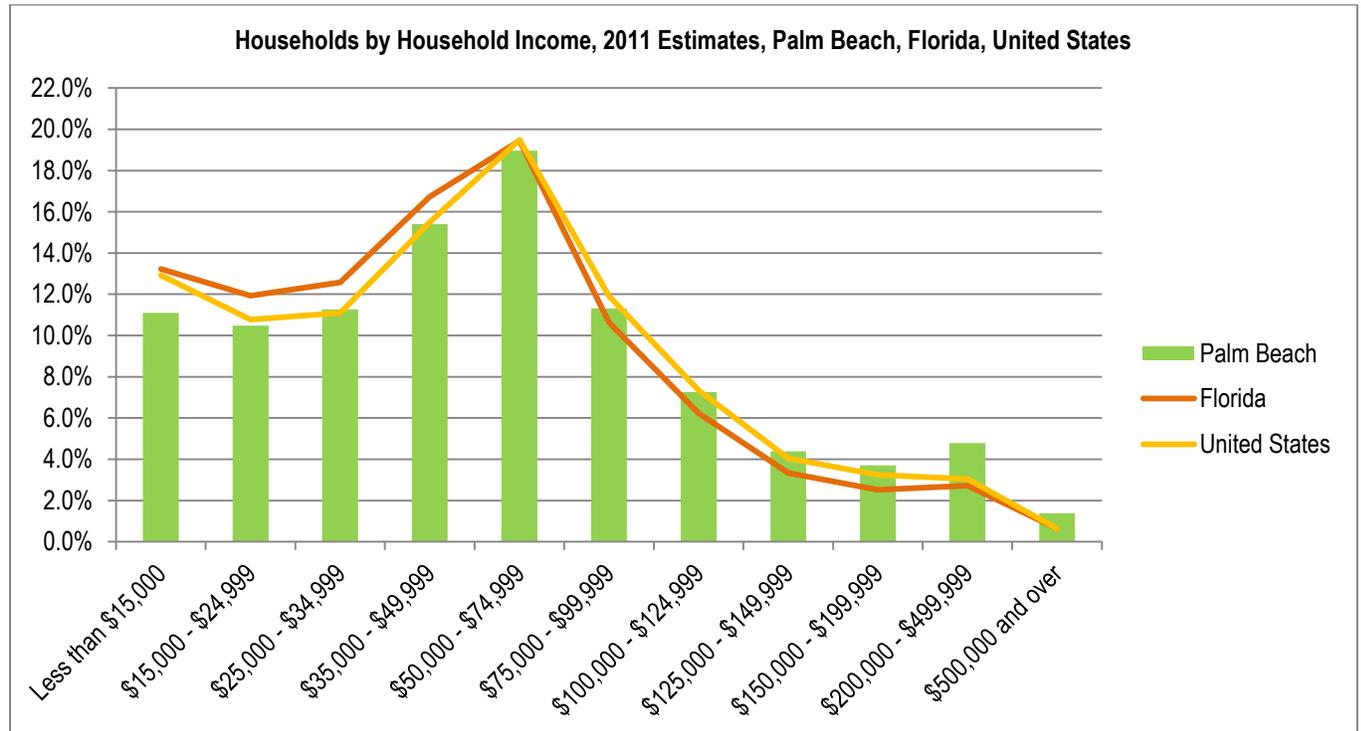

Table 16 shows counts and the percentage of households by income bracket in Palm Beach County, Florida and the United States. Nearly half of households in the county had income less than \$50,000, a percentage slightly lower than Florida and the United States. The percentage of households in the upper income range, over \$150,000, was greater in Palm Beach than in the comparison areas shown. Figure 10 shows this household income data graphically.

Table 16: Households by Household Income, Palm Beach, Florida, United States, 2011 Estimates

	Palm Beach		Florida	United States
	Number	%	%	%
2011 Est. Households by Household Income	533,267			
Income Less than \$15,000	59,137	11.09%	13.23%	12.92%
Income \$15,000 - \$24,999	55,867	10.48%	11.93%	10.77%
Income \$25,000 - \$34,999	60,037	11.26%	12.58%	11.10%
Income \$35,000 - \$49,999	82,124	15.40%	16.73%	15.50%
Income \$50,000 - \$74,999	101,081	18.96%	19.44%	19.49%
Income \$75,000 - \$99,999	60,339	11.31%	10.64%	11.91%
Income \$100,000 - \$124,999	38,702	7.26%	6.24%	7.35%

Figure 10: Households by Household Income, 2011 Estimates, Palm Beach, Florida, United States

Median household income is used to depict the middle point of household income distribution within a given area. In other words, it is the amount that would divide the income distribution within an area into two groups. This measure is not as affected by a few extreme values as an average, such as per capita income.

Table 17 shows median household income in Palm Beach, Florida and the United States by race and ethnicity. In 2011 in Palm Beach, Asian households had at the greatest household income, though these represent only a small segment of households. Black or African American households had the lowest median household income (\$36,157). Figure 11 shows this data graphically.

Table 17: Median Household Income by Race or Ethnicity, 2011 Estimates

	Palm Beach	Florida	United States
2011 Est. Average Household Income	\$76,792	\$63,100	\$67,529

Income Inequality

Table 19 shows the Gini Coefficient of income inequality for Florida counties. The Gini coefficient represents the inequitable distribution of income in a community by household. Typically, a Gini Coefficient is between 0-100, for the purpose of this table the values are multiplied by 100 and can range between 0-100. A value of 100 indicates that all income in the county is concentrated in one household. A value of 0 indicates that all income in the county is equally distributed among households. The range in Florida was 38-52 in the 2010. The Gini Coefficient for the state of Florida as a whole was 47. Palm Beach had a Gini coefficient of 50 and was tied for 7th highest, i.e., greatest income inequality. The z-score is statistical measure used to indicate the number of standard deviations above or below the mean.⁴

Table 20 shows the 2011 Florida Price Level Index for School Personnel (FPLI). The FPLI measures the relative costs of maintaining a given standard of living across Florida's counties and can be used as a Cost of Living Index (COLI). Use of the FPLI assumes districts must offer salaries that will support similar standards of living to attract equally qualified personnel across school districts. The FPLI is constructed so that the population-weighted average is 100. The 9 counties with index values over 101.18 together account for 48% of the state's population. Palm Beach has an index of 103.78, the 2nd highest among Florida counties.⁵

EDUCATION

Educational Attainment

Educational attainment often influences socioeconomic status. As previously noted, low socioeconomic status can hinder access to health care services and can result in less desirable health outcomes.

Table 21 shows school enrollment and educational attainment. Nearly 6% of the population 25 years and older, 54,967 individuals, in Palm Beach County have less than a 9th grade education, and 7%, 66,047 individuals, have some high school classwork but have not received a diploma. More than 87% of individuals 25 years or older Palm Beach have educational attainment of at least a high school diploma and nearly 32% have a bachelor's degree or higher. These rates are slightly higher than Florida's.

Table 21: School Enrollment and Educational Attainment, Palm Beach County and Florida, 2010

	Florida	Palm Beach	
	Percent	Estimate	Percent
SCHOOL ENROLLMENT			
Population 3 years and over enrolled in school	4,614,324	304,965	304,965

Table 22 shows the percentages of individuals, 25 years and older, who have had income in the past 12 months below the poverty level and those who have had income above the poverty level by level of educational attainment. In 2010 in Palm Beach County, of the 11.1% of individuals, 25 years and older, below the poverty level, 31.0% had less than a high school diploma, 32.6% had a high school diploma (or equivalent) and 24.3% had some college. Of those with income at or above the poverty level, 10.4% had less than a high school diploma, nearly 26% were high school graduates (or equivalent), and nearly 64% had a minimum of some college or an associate's degree.

Table 22: Poverty Status in the Past 12 Months of Individuals by Educational Attainment, 2010

	Florida		Palm Beach

High School Graduation Rates

Table 23 shows trends in high school graduation rates, using the Florida calculation, for school years 2001/02 through 2010/11. In the 2010/11 school year the graduation rate in Palm Beach was 79.8%, and increase from 66.6% in the 2001/02 school year. The rate was slightly lower than the 2010/11 graduation rate in Florida as a whole (81.2%).

Table 23: High School Graduation Rates, Palm Beach, Florida, 2001/02-2010/11

County	2001/02	2002/03	2003/04	2004/05	2005/06	2006/07	2007/08	2008/09	2009/10	2010/11
Florida	67.9%	69.0%	71.6%	71.9%	71.0%	72.4%	75.4%	78.6%	80.7%	81.2%
Palm Beach	66.6%	66.0%	65.9%	69.0%	69.3%	71.4%	75.6%	80.1%	82.9%	79.8%

Data Source: FloridaCHARTS, Florida Department of Education, Education Information and Accountability Services (EIAS) Source: 2010-11 Florida Department of Education (FL DOE) cohort graduation data as of 11/3/11

Data Note(s): Florida's high school graduation rate is the percentage of students who graduated within four years of their initial enrollment in ninth grade, not counting deceased students or students who transferred out to attend another public school outside the system, a private school, a home education program, or an adult education program. Incoming transfer students are included in the appropriate cohort (the group whose progress is tracked) based on their grade level and year of entry. Data are for school years (September-June).

Compiled by: Health Council of Southeast Florida, 2012

Table 24 shows school year 2010/11 graduation rates in Palm Beach County and Florida by race and ethnicity. In both Palm Beach and Florida there is considerable disparity in graduation rates between races and ethnicities. In Palm Beach the graduation rate was 90.2% for White students, 67.3% for Black or African American students and 76.1% for Hispanic or Latino students.

Table 24: Florida Graduation Rates by Race/Ethnicity, Palm Beach and Florida, 2010/11 School Year

District	White	Black or African American	Hispanic/Latino	Asian	American Indian/Alaska Native	Two or More Races	Pacific Islander
50 Palm Beach	90.2%	67.3%	76.1%	87.9%	74.4%	85.5%	#

BUSINESS AND EMPLOYMENT

Unemployment

High rates of unemployment can affect the financial stability of individuals within a community, can lead to decreased expenditures for health care and can result in higher rates of uninsured.

Table 29 shows counts of employment and unemployment and rates of unemployment in the civilian labor force in the United States, Florida and Palm Beach County from 2006 to March 2012. Unemployment rates have increased in all areas shown. In March 2012, the unemployment rate in Palm Beach County was 8.8%, a decrease from 10.8% in 2011. The number of unemployed individuals in Palm Beach County more than doubled between 2006 and March 2012. Figure 12 shows the unemployment data trends graphically.

Table 29: Labor Force, Unemployment Counts and Rates, Palm Beach, Florida, United States, 2006-March, 2012

	Labor Force	Employment	Unemployment	Rate (%)
United States				
2006	151,428,000	144,427,000	7,001,000	4.6%

PUBLIC ASSISTANCE BENEFITS

This next section graphs the monthly averages for public assistance data in Palm Beach and Florida for years: 2008, 2009, 2010 and 2011.

Requests for Assistance

Figure 14 shows the monthly averages in number RFA applications received for Palm Beach and Florida for years 2008 -2011. The monthly averages for RFAs increased nearly 26% in Palm Beach from 2008 to 2011. There was a 19% increase in Florida during the same time period.

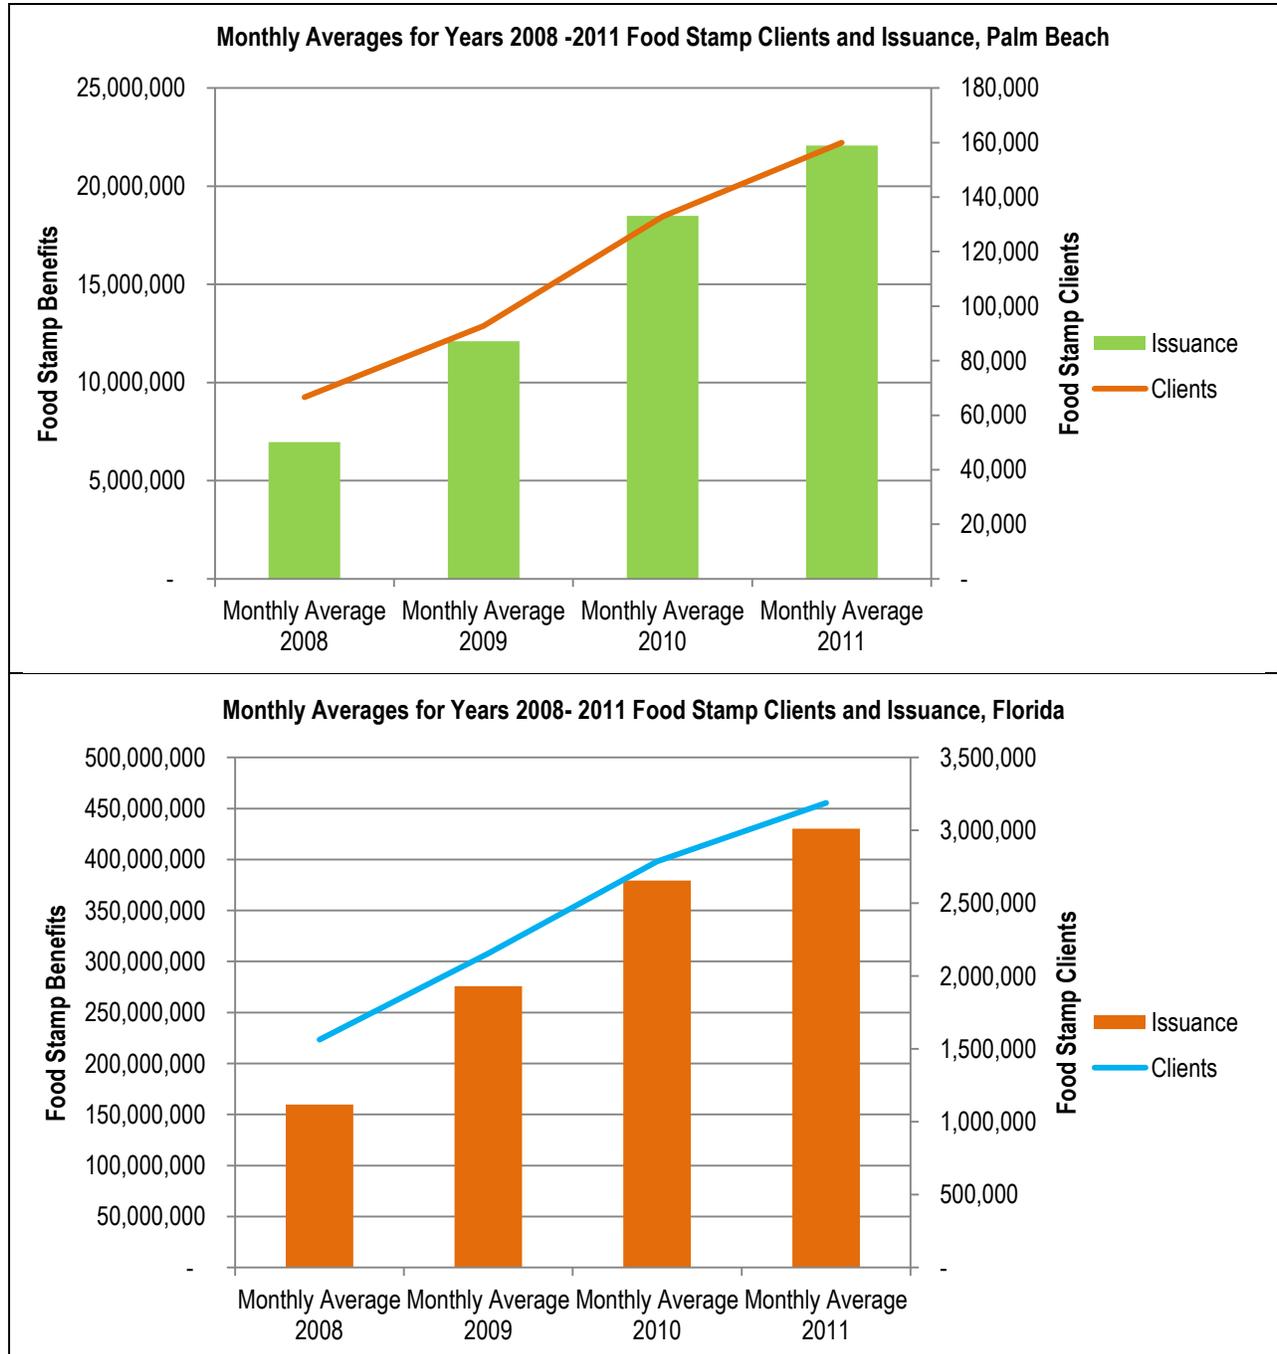

Figure 14: Monthly Averages for Years 2008-2011 RFAs Received, Palm Beach, Florida

Food Stamps

Figure 15 shows the monthly averages for food stamp issuance and food stamp clients in Palm Beach County and Florida for years 2008 -2011. Issuance and number of clients have risen steadily in both areas. From 2008 to 2011 average monthly food stamp issuance increased 217% in Palm Beach and 169% in Florida. During the same time period, average monthly food stamp clients increased 140% in Palm Beach and 103% in Florida.

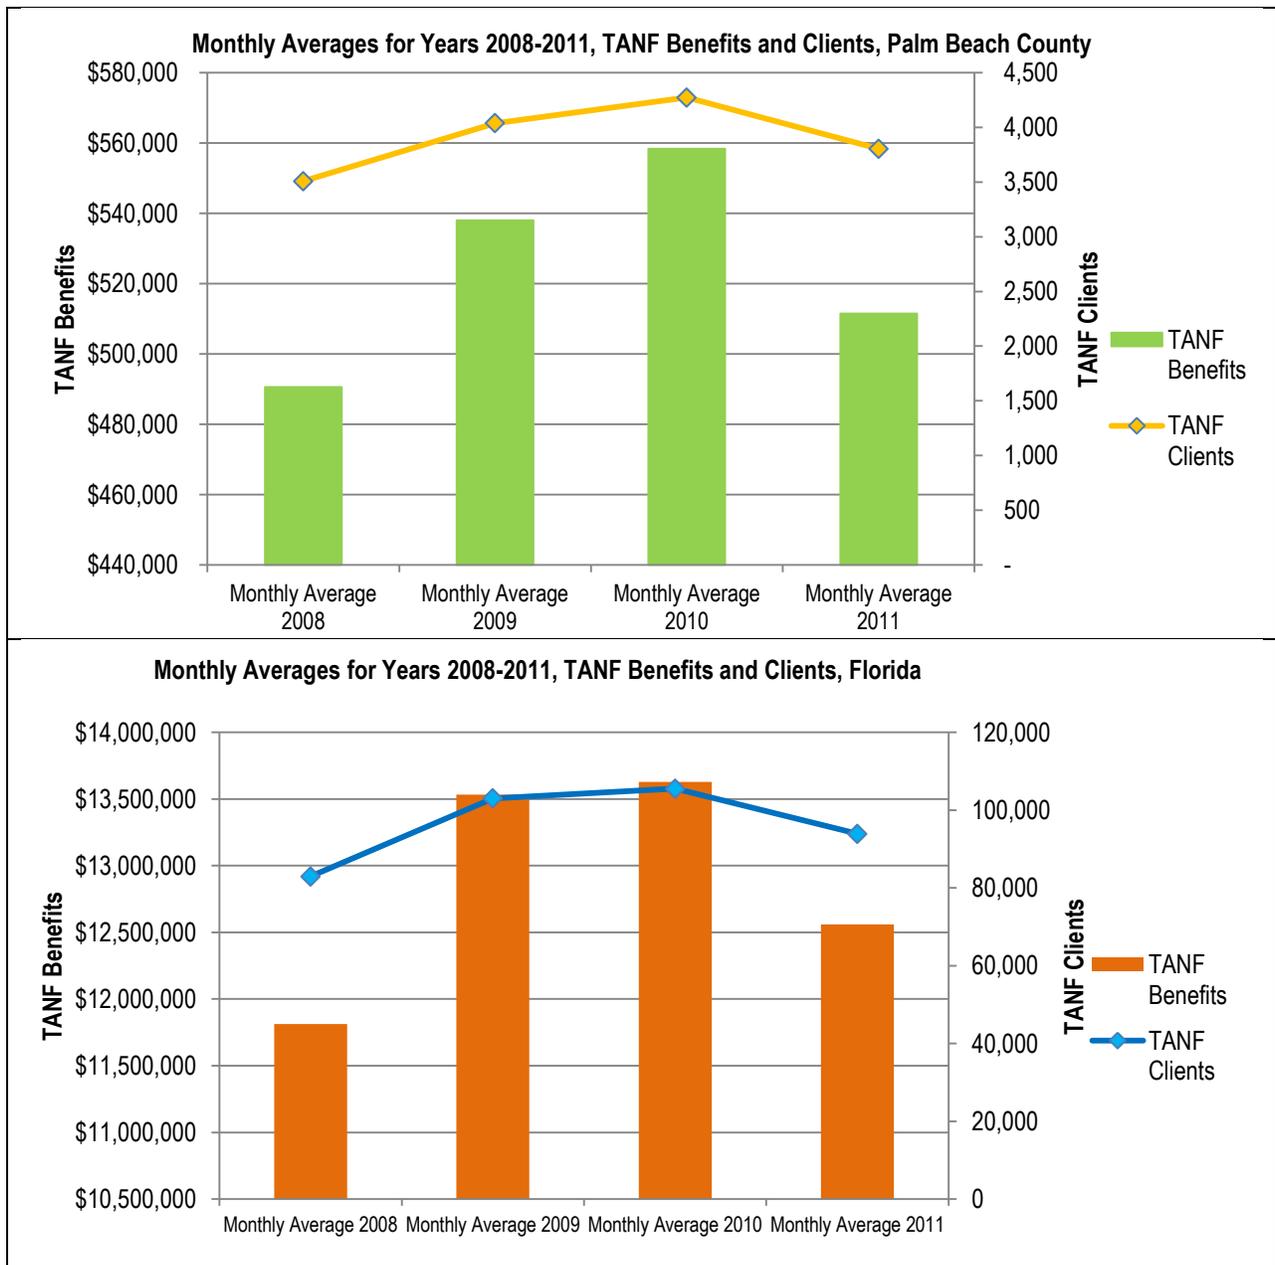

Figure 15: Monthly Averages for Years 2008- 2011 Food Stamp Clients and Issuance, Palm Beach, Florida

Cash Assistance - TANF

Figure 16 shows the monthly averages in number of Temporary Assistance for Needy Families (TANF) benefits and clients in Palm Beach and Florida for years 2008 -2011. In Palm Beach County from 2008 to 2010 the monthly average amount of TANF benefits increased 4% and TANF clients increased 8%. During the same time periods in Florida, benefits increased 6% and clients increased 13%. The amount of benefits and number of clients decreased in both areas in 2011.

Figure 16: Monthly Averages for Years 2008- 2011 TANF Benefits and Clients, Palm Beach, Florida

Medical Assistance

Medicaid is a federally and state funded health program in the United States that provides health services to low income individuals and families. Figure 17 shows the monthly averages in number of in Medicaid clients in Palm Beach County and in Florida for years 2008 -2011. From 2008 to 2011 the monthly average number of Medicaid clients in Palm Beach increased just over 50% and 43% in Florida.

Women, Infants and Children Program

WIC is a supplemental nutrition program that serves to safeguard the health of low-income pregnant, postpartum, and breastfeeding women, infants, and children up to age 5 who are at nutritional risk. The program provides nutritious foods to supplement diets, information on healthy eating, breastfeeding promotion and support and referrals to health care services.

Table 33 shows the number of individuals eligible for WIC benefits, as well as the number served. In 2010, 2.6% of Palm Beach County's population was eligible for WIC and 89.4% of the 32,935 eligible individuals were served by WIC.

HOUSING

Number of Housing Units and Housing Tenure

Table 34 shows the proportion of occupied and vacant housing units, the proportion of owner to renter-occupied housing units and average household size for owner and renter-occupied units in Palm Beach and in Florida. In Palm Beach in 2010, 77.7% of housing units were occupied and of those, 72.2% were owner-occupied. The average household size in renter-occupied units (2.69) was larger than owner-occupied units (2.46) in Palm Beach.

Table 34: Housing Occupancy and Housing Tenure, Palm Beach, Florida, 2010

	Florida		Palm Beach	
	Estimate	Percent	Estimate	Percent

Average Rent

Table 36 shows 2010 rents for Palm Beach County and Florida by price bands and rent as a percentage of household income. Palm Beach County had 137,901 occupied rental units paying rent. 23.9% of these units had a monthly rent for \$750-\$999, 39.7% rented for between \$1,000 and \$1,499 and 20.5% rented for \$1,500 or more per month. The median rent in Palm Beach was \$1,103 compared to \$947 in Florida. Over half of the households in the county expend at least 35% of household income on rent; this is similar to the rate in Florida.

Foreclosures

Figure 18 shows foreclosure classifications for counties in Florida as of March 2012. Each county is classified as having a 'low', 'moderate' or 'high' foreclosure rate. Palm Beach, with 1 in 239 properties having foreclosure actions, is classified as having a high foreclosure rate. A classification of high is given to counties that have more than 1 in 700 properties with foreclosure actions.

PUBLIC TRANSPORTATION

Figure 19 provides information on Palm Tran which is an integral part of the public transportation system in the county. Tri-Rail is another component of the public transportation in the county providing service to Broward and Miami-Dade counties. Currently there are six Tri-Rail stops in the county. More information is available at www.tri-rail.com

Figure 19: Palm Tran Informational Sheet

Quick Facts

- Palm Tran travels to every major destination in Palm Beach County - from Jupiter to Boca Raton and from Palm Beach to the Glades.
- Palm Tran runs seven days a week serving more than 3,400 bus stops with 142 buses.
- Palm Tran provides more than 10 million rides a year.
- Generally speaking, weekday peak service runs every 30 minutes. Off-peak service runs every 60 minutes. Weekend service runs hourly on most routes.
- Timed-Transfer points allow for easy movement from the north/south main routes to the east/west secondary routes.
- System maps and guidebooks are available.
- Customer Service is available to answer trip-planning questions by calling (561) 841-4BUS (4287) or 1-877-930-4287 (toll-free) six days a week from 6:00 a.m. to 7:00 p.m. Monday to Friday, 8:00 a.m. to 6:00 p.m. Saturday.
- All Palm Tran buses are equipped with wheelchair lifts, automatic stop announcement systems and bike racks.
- For safety and security, buses are equipped with surveillance cameras.
- Cash fares are \$1.50 per bus ride for adults. No transfers. All day unlimited ride QUIK Passes are available directly from the driver for \$4.00. QUIK Passes also come in a 31-day pass for \$60.00.
- Seniors (65 and over), students (21 and under with valid school ID) and those with disabilities can ride Palm Tran for the half fare of \$0.75. Reduced Daily (\$2.75) and reduced 31-day (\$45.00) QUIK Passes are also available.
- Any Medicare recipient must show their Medicare card to receive a half fare. Customers with a Veterans Administration card marked "Service Connected" receive a half fare. Please note: Customers with a Medicaid card do not receive a half fare.
- Children under 8 and police officers in uniform or with badge can ride Palm Tran FREE.

CRIME

Crime in a community can influence health status both as a result of direct injury from the crimes themselves and as a result of the emotional stresses present in areas of high crime. Table 40 shows counts of reported crimes in Palm Beach County by the type of crime from the Uniform Crime Report (UCR). The UCR is a well-defined list of reportable offenses and does not include all offenses reported to the police.⁶ The index offenses are: murder, sexual offenses, robbery, aggravated assault, burglary, larceny and motor vehicle theft. The index rate is the number of reported index crimes per 100,000 population. From 2009 to 2010 the number of arrests in the county decreased 5.2%, the violent rate decreased 13.6% and the non-violent rate decreased 11.1%.

Table 40: Summary of Uniform Crime Report (UCR) Data, Palm Beach, 2010

	2009	2010	% Change
Population	1,287,344	1,286,461	-0.1%
Total Arrests	74,337	70,479	-5.2%
Total Index Offenses	60,011	53,165	-11.5%
Violent Rate	624.9	543.5	-13.6%
Non-Violent Rate	4,036.8	3,589.10	-11.1%
Index Rate	4,661.60	4,132.70	-11.4%

HEALTH STATUS PROFILE

This section provides data on Palm Beach County's health status for the following health indicator categories: Maternal and Child Health, Behavioral Health, Hospital Utilization, Morbidity and Mortality. The data presented herein can be used to identify health care priorities and to inform policy and program development.

Data in the section may be present as age-adjusted rates or as crude rates. Age adjustment, also called age standardization, is a statistical technique utilized to better allow populations to be compared when the age profiles and distributions within the populations are different.⁷ Age adjusted rates are often used to answer the question, "How does the rate in my county compare to the rate in another even though the distribution of persons by age may vary?"⁸ The frequency with which health events occur is almost always related to age. Therefore, in order to examine other risk factors independent of age, age adjustments are often used in public health analyses. The 2000 US Standard population is often used as a guideline to calculate age-adjusted rates.⁹ Crude rates, conversely, are the total number of events in a given population over a period of time.¹⁰ Crude rates are useful in examining the burden of disease or death on a community.

MATERNAL & CHILD HEALTH

PRENATAL CARE ACCESS

Table 43 shows prenatal care status of births in Palm Beach and the state of Florida as a whole in 2008, 2009 and 2010. Using the Kotelchuck Index to determine adequate care, the percentage of births in Palm Beach where the mother had adequate prenatal care was 73.2% in 2010, up from 67.5% in 2008. A greater percentage of births had prenatal care during the first trimester in Florida (79.3%) than in Palm Beach (75.7%). However, Florida had a higher percentage of births with no prenatal care. The number of births with no prenatal decreased in the county and in Florida in the time period shown.

Source: FloridaCHARTS, Florida Department of Health, Bureau of Vital Statistics

Data Note(s): Starting in 2004, trimester prenatal care began is calculated as the time elapsed from the date of the last menstrual period to the date of the first prenatal care visit. Prior to 2004, these data were obtained by direct question that noted the trimester the mother began prenatal care. Consequently, these data are not comparable to data from prior years. Births with unknown information as to when prenatal care began are excluded from the denominator.

BIRTH RATES

Total Births

Table 44 shows the number of resident live births in Palm Beach County and Florida for 2008, 2009 and 2010. The rate per 1,000 individuals was lower in Palm Beach for all three years shown and ranged from 10.7 - 11.8 per 1,000.

Table 44: Total Resident Live Births, Palm Beach, Florida, 2008, 2009, 2010

Table 48 shows the percent of repeat births by mother's age in Palm Beach and in Florida. Rate of repeats births is calculated by dividing the number of repeat births to mothers in an age group by the number of births to mothers in that age group. The rate of repeat births to mothers in the 15-17 age group was slightly higher in Palm Beach (10.9%) than in Florida (9.0%).

BIRTH WEIGHT

Very Low Birth Weight

Proper prenatal care and healthy behaviors during pregnancy can reduce the likelihood of low birth weight babies. Table 49 shows the number and percentage of live births classified as “very low birth weight”, meaning less than 1500 grams (3 lbs., 4 oz.). In 2010, the percentages were similar in Palm Beach (1.5%) and in Florida (1.6%).

*Healthy People 2020 Target
Very low birth weight = 1.4% of births*

Table 49: Live Births Under 1500 Grams to All Mothers, Palm Beach, Florida, 2008, 2009, 2010

	Number of Very Low Birth Weight Births			Number of Total Births			Rate / Percent

INFANT MORTALITY

Infant Mortality

Infant mortality is the death of an infant 0-364 days old. Infant mortality in Palm Beach County ranged between 5.5 and 6.1 per 1,000 live births in 2008-2010. The rate in Palm Beach was consistently lower than Florida for the time period shown.

*Healthy People 2020 Target
Infant deaths within 1 year = 6.0 per 1,000 live births*

Table 51: Total Infant Mortality (0-364 days), Palm Beach, Florida, 2008, 2009, 2010

	Number of Infant Deaths			Number of Total Live Births			Rate per 1,000

Table 52 shows infant deaths in Palm Beach and Florida by race and ethnicity. The rate of infant death in Palm Beach was considerably higher among the ‘Black & Other’ population, ranging from 7.2 -9.5 per 1,000 than in the ‘White’ population 4.4 - 4.7 per 1,000. The rate of infant deaths in Palm Beach was higher among the ‘Non-Hispanic’ population, ranging from 5.6- 6.7 per 1,000, than in the ‘Hispanic’ population 4.9 – 5.2 per 1,000. The rates in the county were consistently lower, in all categories shown, than Florida in the time period provided.

IMMUNIZATION

Kindergarten Immunization

Having a high percentage of individuals within a population immunized can help prevent the spread of many diseases. Table 54 shows the percent of kindergarten students who have received vaccinations. The 2010 rate in Palm Beach was 90.8%, slightly lower than percentage in Florida (91.3%).

*Healthy People 2020 Target
Vaccination coverage levels for children in kindergarten = 95%*

Table 54: Immunization Levels in Kindergarten, Palm Beach, Florida, 2008, 2009, 2010

Vaccine Preventable Diseases

Table 55 shows the rate per 100,000 individuals of vaccine preventable diseases in Palm Beach and in Florida. Due to the relatively low number of the events in the county, small changes in the number of cases can cause considerable changes in the rate. For the time period shown, the rate was consistently lower in Palm Beach than in Florida with between 24 -39 cases per year.

Table 55: Selected Vaccine Preventable Disease Rate for All Ages, Palm Beach, Florida, 2008, 2009, 2010

ORAL HEALTH

The Palm Beach County Health Department is one of 44 county health departments in the state to offer dental services as part of the dental safety net. The dental safety net “includes facilities, providers, and payment programs to support dental care for underserved populations. In Florida, as nationwide, safety net providers are a source of dental care for Medicaid (and uninsured) patients who do not have access to private providers.”¹¹ In 2011, the Public Health Dentistry Division of the Palm Beach County Health Department had 31,257 dental visits treating 16,962 dental patients.¹²

Table 56 shows the number emergency room visits for dental conditions generally considered preventable in Palm Beach County for 2008-2010.

SEXUAL BEHAVIORS

This section looks at sexual health and related behaviors and includes indicators on unwanted sexual experiences, testing for HIV and pregnancy prevention. Data on sexually transmitted diseases and infections, including HIV and AIDS can be found in the morbidity and mortality sections of the assessment.

Table 63 shows the percentage of adults who reported, in the Behavioral Risk Factor Surveillance Survey (BRFSS), they had an unwanted sexual experience in the past year. The percentage in Palm Beach was 4.7%, putting it in quartile 1 (of 4), the most favorable among the counties.

Table 63: Percentage of Adults who had an unwanted sexual experience in the past 12 months, Palm Beach, Florida, 2007

Sexually Transmitted Infections/Diseases

Please refer to the section on Morbidity and Mortality section for data sexually transmitted infections and diseases (STIs and STDs).

Adults Tested for HIV

As seen in Table 64, 45.5% percent of adults in Palm Beach County, less than 65 years of age, report having ever been tested for HIV. This rate is lower than Florida with 48.4% of the population reporting having been tested. Based on a scale of 1 through 4; with quartile 1 representing the highest percentages of individuals being tested for HIV among Florida counties, Palm Beach is ranked in quartile 3.

Table 64: Adults less than 65 years of age who have ever been tested for HIV, Palm Beach, Florida, 2010

ALCOHOL CONSUMPTION AND SUBSTANCE ABUSE

Excessive alcohol consumption is the third leading lifestyle-related cause of death for people in the United States each year.¹⁴ Excessive drinking is a risk factor associated with number of adverse health outcomes including: alcohol poisoning, hypertension, acute myocardial infarction, sexually transmitted infections, unintended pregnancy, fetal alcohol syndrome, sudden infant death syndrome, suicide, interpersonal violence, and motor vehicle crashes.¹⁵

Excessive drinking, as used by the Behavioral Risk Factor Surveillance System (BRFSS), includes binge drinking and/or heavy drinking and is a frequently used indicator at the population level. Binge drinking is defined as drinking five or more drinks on a single occasion for men and four or more drinks on a single occasion for women. Heavy drinking is defined as drinking more than two drinks per day on average for men and more than one drink per day on average for women.¹⁶

¹⁴ Mokdad AH, Marks JS, Stroup DF, Gerberding JL. Actual causes of death in the United States, 2000. *JAMA* 2004;291(10):1238–1245.

Emergency Department Acuity

The “Acuity Stratification Module” reports the number of cases for each of the five CPT (Current Procedural Terminology) codes that describe the acuity of the medical problem(s). There are 5 CPT codes for acuity stratification: minor severity, low to moderate severity, moderate severity, high severity (require urgent evaluation by the physician but do not pose an immediate significant threat to life or physiologic function), high severity and pose an immediate significant threat to life or physiologic function.¹⁷

¹⁷ “Hospital Inpatient & Emergency Department Analytical System Manual”, 2011

Table 94 shows Emergency Department visits, at the top 25 most frequented hospitals by Palm Beach residents, by acuity.

OTHER HOSPITALIZATION DATA

Chronic Disease Hospitalizations

Table 95 shows hospitalizations of Palm Beach County residents in 2010 for chronic conditions, organized by condition and most frequently utilized hospitals. “A chronic condition is a condition lasting 12 months or longer and meeting one or both of the following tests: (a) the condition places limitations on self-care, independent living and social interactions; (b) the condition results in the need for ongoing intervention with medical products, services and special equipment.”¹⁸

Prevention Quality Indicators

“The Prevention Quality Indicators (PQI) are measures of potentially avoidable hospitalizations for Ambulatory Care Sensitive Conditions (ACSCs) which, though they rely on hospital discharge data, are intended to reflect issues of access to, and quality of, ambulatory care in a given geographic area.” ACSC “are conditions for which good outpatient care can potentially prevent the need for hospitalization or for which early intervention can prevent complications or more severe disease”.¹⁹ The PQIs are population-based and adjusted for covariates. Even though these indicators are based on hospital inpatient data, they provide insight into the community health care system or services outside the hospital setting”.²⁰ In terms of assessing PQIs, an ideal PQI, though not likely feasible, is zero. The numerator is the number of ‘cases’ and the denominator is a figure, determined by the Agency for Healthcare Research and Quality, to be the population at risk

Table 96 shows the PQIs for Palm Beach County residents discharged from any Florida hospital in 2010. Table 97 shows patients from anywhere discharged from any of the Palm Beach County hospitals in 2010.

Table 96: PQI, Palm Beach Residents Discharged From Any Florida Hospital, 2010

Pediatric Quality Indicators

“The Pediatric Quality Indicators (PDIs) are a set of measures that can be used with hospital inpatient discharge data to provide a perspective on the quality of pediatric healthcare. Specifically, PDIs screen for problems that pediatric patients experience as a result of exposure to the healthcare system and that may be amenable to prevention by changes at the system or provider level”²¹

Table 98 shows the Pediatric Quality Indicators (PDIs) for Palm Beach County residents discharged from any Florida hospital in 2010. Table 99 shows PDIs for Palm Beach County hospitals where the patient is from anywhere.

NURSING HOME UTILIZATION

Tables 101 and 102 show 2011 nursing home utilization data for Palm Beach County including number of beds, % occupancy, average daily census (ADC), admissions by payer source and patient days by payer source. Percent occupancy is the percentage of hospital beds occupied in a year. The average occupancy rate is calculated by multiplying the number of beds by 365 and then dividing the total number of inpatient days. The ADC is the average number of staffed beds that are occupied each day. ADC is calculated by dividing the number of inpatient days by 365.

MORBIDITY

Morbidity is another term for illness. The tables and figures in the next section below illustrate the number of and the rates of hospitalizations for the following diseases: coronary heart disease, cardiovascular disease, stroke, chronic lower respiratory disease (CLRD), diabetes, cancer, obesity, and communicable diseases including enteric disease, tuberculosis, HIV/AIDS and other sexually transmitted diseases.

Coronary Heart Disease

Heart disease is the leading cause of death for people of most races and ethnicities in the United States. According to the Centers for Disease Control and Prevention (CDC), coronary heart disease (CHD) is the most common type of heart disease. In 2010, heart disease will cost the United States \$316.4 billion.²²

As shown in Table 103, Palm Beach County and the state of Florida both show a downward trend in the number of hospitalizations due to coronary heart disease in the years of 2008-2010. The rate was consistently lower in Palm Beach than in Florida. In 2010, the age-adjusted rate in Palm Beach was 307.9 per 100,000 individuals.

Table 103: Age-Adjusted Hospitalization Rate From Coronary Heart Disease, Palm Beach, Florida, 2008, 2009, 2010

	Number of Hospitalizations			Age-Adjusted Hospitalization Rate		
	2008	2009	2010	2008	2009	2010
Florida	112,918	103,981	98,075	442.1	401.6	376.9

Cardiovascular Disease

Figure 23 charts the number of adults, by race/ethnicity and by gender, who reported ever having a heart attack, angina or coronary heart disease. “Angina is a type of chest discomfort caused by poor blood flow through the blood vessels (coronary vessels) of the heart muscle (myocardium).”²³

Figure 23: Adults who have ever had a heart attack, angina, or coronary heart disease, by Race/Ethnicity and Gender, Palm Beach, Florida, 2010

²³ A.D.A.M. Medical Encyclopedia, PubMed Health

Stroke

The age-adjusted hospitalization rate from stroke averaged 232.3 per 100,000 in Palm Beach between 2008 and 2010, lower than the rate in Florida which average 265.5 per 100,000. The rates in both areas remained stable over the time period shown.

Table 104: Age-Adjusted Hospitalization Rate From Stroke, Palm Beach, Florida, 2008, 2009, 2010

	Number of Hospitalizations			Age-Adjusted Hospitalization Rate		
	2008	2009	2010	2008	2009	2010

Chronic Lower Respiratory Disease (CLRD)

Chronic lower respiratory diseases are diseases that affect the lungs. The most serious of these diseases is chronic obstructive pulmonary disease (COPD) which includes Emphysema and chronic bronchitis. Cigarette smoking is the main cause of COPD.²⁴

Rates of chronic lower respiratory disease (CLRD) increased between 2008 and 2010 in both Palm Beach and Florida as shown in Table 105. The rate in Palm Beach was consistently lower than in Florida during the years shown and was 327.0 per 100,000 in 2010.

Diabetes

Table 106 shows hospitalizations from or with diabetes in Palm Beach and Florida from 2008 to 2010. The rate was consistently lower in Palm Beach than in Florida. In 2010, the rate in Palm Beach County was 2,553.9 per 100,000.

Table 106: Hospitalizations From or With Diabetes, Palm Beach, Florida, 2008, 2009, 2010

Cancer Incidence

Table 107 shows cancer (all types) incidence in 2006, 2007 and 2008. The rate increased slightly in both areas during the time period shown. The 2008 age-adjusted rate was slightly higher in Palm Beach (467.2 per 100,000) than in Florida (455.8 per 100,000).

Table 107: Cancer Age-Adjusted Incidence Rate, Palm Beach, Florida, 2006, 2007, 2008

County	Number of Cases			Age-Adjusted Incidence Rate		
	2006	2007	2008	2006	2007	2008

Breast, Colorectal, Lung, Skin and Prostate Cancer Incidence

Table 108 shows cancer incidence by type in Palm Beach and in Florida. In 2008, the highest age-adjusted cancer rate in Palm Beach was prostate cancer with 126.9 per 100,000, followed by breast cancer at 126.2 per 100,000, lung cancer at 58.8 per 100,000 and colorectal cancer at 39.0 per 100,000.

Rates calculated using July 1 population estimates from the Florida Legislature, Office of Economic and Demographic Research.

Obesity

Overweight and obesity are often associated with poor health outcomes and rapidly increases the risk of mortality. Overweight and obese individuals can develop other diseases such as high blood pressure, high cholesterol, heart disease, stroke, some types of cancer and orthopedic issues.

For youth, overweight and obese is determined by body mass index (BMI) percentile using sex- and age-specific reference data from the 2000 CDC growth charts. BMI is calculated by dividing weight in pounds by height in inches, squared and multiplying by 703. Table 110 shows the percentage of overweight and obese high school youth by race and ethnicity

Table 110: High School Youth, Overweight and Obese, Palm Beach, 2011

	Total	American Indian/ Alaska Native	Asian (non- Hispanic)	Black (non- Hispanic)	Hispanic	Native Hawaiian or Other Pacific Islander (non- Hispanic)	White (non- Hispanic)	Multiple Race (non-Hispanic)
Overweight (students who were \geq 85th percentile but $<$ 95th percentile for BMI)	13.8%	N/A	N/A	17.4%	16.2%	N/A	10.5%	N/A
Obese (students who were \geq 95th percentile for BMI)	9.3%	N/A	N/A	11.6%	9.7%	N/A	7.5%	N/A
Described themselves as slightly or very overweight	24.4%	N/A	N/A	23.9%	25.1%	N/A	24.5%	N/A

Source: High School Youth Risk Behavior Survey, 2011

Data Note: based on sex- and age-specific reference data from the 2000 CDC growth charts, N/A = $<$ 100 respondents for the subgroup

Compiled by: Health Council of Southeast Florida

For adults, a BMI between 25 and 29.9 is considered overweight and an adult who has a BMI of 30 or higher is considered obese.²⁵

Palm Beach ranked 66th out of the 67 counties in percentage of adults who are obese with 19.4%. Florida's rate of obese adults was 27.2%.

*Healthy People 2020 Target
Proportion of adults who are obese = 30.6%*

INFECTIOUS DISEASE

Tuberculosis

Table 113 shows the number of tuberculosis cases in Palm Beach and in Florida from 2001-2010. The number of cases declined in both areas in the time period shown. In 2010, there were 69 tuberculosis cases in Palm Beach County yielding a rate of 5.4 per 100,000.

*Healthy People 2020 Target
Tuberculosis = 1 new case per 100,000 population*

Reportable Diseases

The rate of reportable diseases was fairly similar in Palm Beach and in Florida from 2008 - 2010. Both areas had an increase from 2008 to 2009 and a decrease in 2010. In 2010, the rate of reportable diseases in Palm Beach County was 91.7 per 100,000.

Table 114: Total Reportable Disease Cases, Palm Beach, Florida, 2008, 2009, 2010

	Number of Cases			Rate per 100,000		
	2008	2009	2010	2008	2009	2010
Florida	17,907	24,727	20,455	95.2	131.4	108.9
Palm Beach	1,348	1,639	1,180	104.2	127.1	91.7

HIV Incidence

As shown in Table 115, the rate of reported new HIV cases per 100,000 individuals in Palm Beach ranged from 24.4 to 40.7 per 100,000 and averaged 30.5 per 100,000 in the time period shown. The rate in Florida averaged 31.8 per 100,000.

For HIV testing data by sex and by race/ethnicity, please see Table 65.

Table 115: HIV Incidence, Palm Beach, Florida, 2008, 2009, 2010

	Number of Reported New Cases			Rate per 100,000		
	2008	2009	2010	2008	2009	2010
Florida	7111	5608	5211	37.8	29.8	27.7
Palm Beach	527	340	314	40.7	26.4	24.4

Source: FloridaCHARTS, Florida Department of Health, Bureau of HIV/AIDS

Data Note(s): Generally, HIV cases remained fairly stable with an increase in 2002 due to increased HIV testing statewide as part of the Get to Know Your Status campaign. Since that time, newly reported HIV cases have decreased each year until 2007. Since then, reporting changes have caused fluctuations in HIV cases. For example, enhanced reporting laws were implemented in Nov. 2006, and the expansion of electronic lab reporting in 2007 led to an artificial peak in HIV cases in 2007 and 2008 followed by an artificial decrease in 2009 and an expected approach to leveling in 2010. Cases reported in correctional facilities are excluded from the county totals, but are included in the state total. Rates calculated using July 1 population estimates from the Office of the Governor

Rates calculated using July 1 population estimates from the Office of the Governor.

AIDS Incidence

Table 116 shows new AIDS cases in Palm Beach County and Florida in 2008, 2009 and 2010. The number of new cases in Palm Beach ranged from 250 – 339 cases per year in the time period shown and the rate averaged 23.3 per 100,000.

Healthy People 2020 Target
Number of new AIDS cases among adolescents and adults = 13.0 new cases per 100,000

Table 116: AIDS Incidence, Palm Beach, Florida, 2008, 2009, 2010

	Number of Reported New AIDS Cases			Rate per 100,000		
	2008	2009	2010	2008	2009	2010
Florida	4,701	4,429	3,461	25.0	23.5	18.4
Palm Beach	339	313	250	26.2	24.3	19.4

Source: FloridaCHARTS, Florida Department of Health, Bureau of HIV/AIDS

Data Note(s): Generally, AIDS cases remained fairly stable in the early 2000s, with an increase in 2004 due to increased CD4 testing statewide. Electronic laboratory reporting delays in late 2007 decreased cases in that year, while contributing to a spike in 2008. The expansion of electronic lab reporting increased the timeliness of reporting, which further contributed to the artificial spike in 2008 followed by the artificial dip in 2009 & 2010. Cases reported in correctional facilities are excluded from the county totals, but are included in the state total. Rates calculated using July 1 population estimates from the Office of the Governor.

SEXUALLY TRANSMITTED INFECTIONS/ DISEASES

If left undetected and untreated sexually transmitted infections/disease data can lead to tubal infertility, ectopic pregnancy, pelvic inflammatory disease, chronic pelvic pain and cervical cancer.²⁶

The total gonorrhea, chlamydia & infectious syphilis cases for Palm Beach County averaged 358.6 per 100,000 during the time period shown. The rate was consistently lower in Palm Beach than in Florida in 2008 - 2010.

Table 117: Total Gonorrhea, Chlamydia & Infectious Syphilis, Palm Beach, Florida, 2008, 2009, 2010

	Number of Reported Cases			Rate per 100,000

MORTALITY

Leading Causes of Death

Table 118 shows numbers of deaths, percent of total deaths, crude rate, age-adjusted rate and years of potential life lost for the leading causes of death in Palm Beach County. In 2010, there were 12,999 deaths. The most frequent cause of deaths was heart disease accounting for 26.4% of deaths, followed by cancer, responsible for 24.1% of deaths. The greatest age-adjusted death rate was due to cancer. Unintentional injury deaths had the highest rate of years of potential life lost (YPLL) with 1167.2 per 100,000 people under 75, indicative of deaths to a population with a younger average age. Years of Potential Life Lost is an estimate of premature mortality and is the number of years of life lost among persons who die before a predetermined age (75 years).²⁷

Table 118: Major Causes of Death, Palm Beach, 2010

Cause of Death	Deaths	Percent of Total Deaths	Crude Rate Per 100,000	Age-Adjusted Death Rate Per 100,000	YPLL < 75 Per 100,000 Under 75

Source: FloridaCHARTS, Florida Department of Health, Office of Health Statistics and Assessment

Data Note: Data for 1999 and subsequent years are not fully comparable to data from 1998 and prior years, due to changes in coding of causes of deaths resulting from the switch from the ninth revision of the International Classification of Diseases (ICD9) to the tenth revision (ICD10). Age-adjusted death rates are computed using the year 2000 standard population. YPLL = Years of Potential Life Lost.

Number of Deaths by Race and Gender

Table 120 shows mortality counts organized by race and gender in Palm Beach County in 2010. The number of deaths from Major Cardiovascular Disease, 'Chronic Liver Diseases & Cirrhosis', 'Nephritis, Nephrotic Syndrome & Nephrosis', Parkinson's Disease and all injuries were greater in males than in females. Deaths from Chronic Lower Respiratory Disease and Alzheimer's Disease were greater in females.

Cancer Deaths

In the United States, cancer is the second leading cause of death, responsible for 1 in 4 deaths. About 1.5 million new cancer cases were expected to be diagnosed in 2010. About 569,000 Americans were expected to die of cancer in 2010.²⁸

Table 123 shows cancer deaths in 2010 in Palm Beach organized by type and age. Trachea, bronchus and lung cancer were responsible for 855 of the 3136 cancer related deaths in the county and were responsible for 6.6% of all deaths in the county. The next most frequent cause of death by cancer was Lymphoid, Hematopoietic and Related Tissue, responsible for 349 deaths.

Deaths Due to AIDS

In the United States, more than 1 million people are currently living with HIV/AIDS. Since the U.S. epidemic began, an estimated 617,025 people have died of AIDS.²⁹

Table 124 shows deaths due to HIV/AIDS in Palm Beach and Florida in the years 2000 - 2010. Deaths due to HIV/AIDS in Palm Beach ranged between 64 - 165 deaths per year in the time period shown. There was a 61% decrease in the number of deaths from 2000 to 2010. In 2010, the rate in Palm Beach was 5.0 per 100,000 population, slightly lower than the rate in Florida which was 5.7.

Table 124: HIV/AIDS Crude Death Rate, Palm Beach, Florida, 2000-2010

Years	Palm Beach		Florida
	Count	Rate	Rate
2000	165	14.5	11.3
2001	147	12.7	10.1
2002	157	13.2	10.2
2003	156	12.8	10.1
2004	175	14.0	9.7
2005	149	11.7	9.5
2006	162	12.6	9.5
2007	118	9.1	8.1
2008	118	9.1	7.5
2009	103	8.0	6.5
2010	64	5.0	5.7

Source: FloridaCHARTS, Florida Department of Health, Bureau of Vital Statistics

Data Note(s): ICD-10 Code(s): B20-B24. Rates are per 100,000 population and are calculated using population estimates provided by the Florida Legislature, Office of Economic and Demographic Research. Data for 1970-78, 1979-98, and 1999-present are not fully comparable due to changes in coding causes of death. Consequently, increases or decreases in 1979 and 1999 may not be due to changes in disease trends but rather coding changes. Starting with 2003 deaths, the sum of the deaths from all counties will not equal the total number of resident deaths due to an unknown county of residence on some records.

Compiled by: Health Council of Southeast Florida, 2012

Unintentional Injury Deaths

According to the National Center for Health Statistics, unintentional injuries are the fifth leading cause of death overall, and the leading cause of death for individuals in the 1-4, 5-14, 15-24 and 25-44 age groups.³⁰

²⁹ www.niaid.nih.gov/topics/HIVAIDS/Understanding/Pages/quickFacts.aspx

³⁰ Kochanek KD, Xu JQ, Murphy SL, et al. Deaths: Preliminary data for 2009. National vital statistics reports; vol 59 no 4. Hyattsville, MD: National Center for Health Statistics. 2011.

Table 125 shows unintentional injury death counts and rates in Palm Beach and Florida by type of injury. Unintentional poisonings were responsible for 192 deaths, followed by unintentional falls causing 146 deaths and motor vehicle crashes causing 135 deaths. Palm Beach County is currently below the HP 2020 target for Poisoning Deaths, Fall-Related Deaths, Unintentional Drowning, and Unintentional Fires.

Healthy People 2020 Target
Poisoning deaths = 13.1 deaths per 100,000 population
Motor vehicle crash deaths = 12.4 deaths per 100,000 population
Fall-related deaths = 7.0 deaths per 100,000 populations
Drowning deaths = 1.1 per 100,000 population
Fire deaths = .86 deaths per 100,000 population

Table 125: Unintentional Injuries by Type, Crude Death Rate, Palm Beach, Florida, 2010

HEALTH RESOURCE AVAILABILITY AND ACCESS

LICENSED FACILITY OVERVIEW

Hospitals

Table 127 lists the licensed hospitals in Palm Beach County, their location, the number of licensed beds and profit status. The Agency for Health Care Administration designates hospitals as ‘not-for-profit’ and ‘for-profit’, these terms are often used interchangeably with ‘tax-exempt’ and ‘tax-paying’. A.G. Holley State Hospital, part of the Florida Department of Health, a center for diagnosis, treatment and cure of tuberculosis³¹ is slated to close in 2012.

Home Health Agencies

A listing of Agency for Health Care Administration licensed home health agencies is located at Appendix B.

AHCA Licensed Facilities “All Types”

A listing of all Agency for Health Care Administration licensed facilities is located at Appendix C.

HEALTH CARE PROVIDER SUPPLY

Physicians

The number of physicians in the county increased from 3,518 in fiscal year 2008-09 to 4,075 in fiscal year 2010-11. The number of physicians per 100,000 individuals was slightly lower in Palm Beach (316.6) than in Florida (336.3). This data does not detail whether the physician is actively practicing medicine in the county and may not be an accurate representation of access.

Table 129: Total Licensed Physicians (Fiscal Year), Palm Beach, Florida, FY 2008-09 , FY 2009-10, FY 2010-11

	Number of Physicians			Rate per 100,000		
	FY 2008-09	FY 2009-10	FY 2010-11	FY 2008-09	FY 2009-10	FY 2010-11
Florida	56,177	56,561	63,187	298.6	300.6	336.3
Palm Beach	3,518	3,549	4,075	271.9	275.3	316.6

Source: FloridaCHARTS, Florida Department of Health, Division of Medical Quality Assurance

Data Note(s): Licensure data is for a fiscal year (July 1-June 30). Sum of county totals does not equal the state total due to licensees with out of state addresses. Data includes actively licensed providers only. Rates calculated using July 1 population estimates from the Office of the Governor

Compiled by: Health Council of Southeast Florida, 2012

Nurses

As of June 2012, there were 15,031 licensed Registered Nurses with an 'address of record' in Palm Beach County according the Florida Department of Health license verification database. As with physicians, this number is not necessarily indicative of the number of nurses who are actively practicing in the county and may not be an accurate representation of access to providers.

Dentists

Table 130 shows the number and rate per 100,000 of licensed dentists in Palm Beach and Florida. Similar to physicians and nurses, this number is not necessarily indicative of the number of dentists who are actively practicing in the county and may not be an accurate representation of access to dental services.

Table 130: Total Licensed Dentists (Fiscal Year), Palm Beach, Florida, FY 2008-09 , FY 2009-10, FY 2010-11

	Number of Dentists			Rate per 100,000

FEDERAL HEALTH PROFESSIONAL SHORTAGE AREA (HPSA)

Health Professional Shortage Areas (HPSAs) are areas, populations or institutions designated by the Health Resources and Services Administration (HRSA) to have shortages of primary medical care, dental or mental health providers. HPSA designations are based on several criteria including: a rational need for services, a provider to population ratio that falls below a set criteria, and an occurrence of current health providers being over-utilized, inaccessible or excessively distant.

“HPSA scores range from 1 to 25 for primary care and mental health, 1 to 26 for dental. The higher the score, the greater the priority.

All Federally Qualified Health Centers and those Rural Health Clinics that provide access to care regardless of ability to pay receive automatic facility HPSA designation. These facilities may have a HPSA score of 0”. # Short indicates the number of full-time equivalent providers needed to remove the designation.³²

Primary Care – Palm Beach County

There are three different types of primary care HPSA designations: geographic area, population group and facilities, each with its own criteria for designation. More information regarding criterion can be accessed on HRSA’s website.

Table 131 shows the primary care health professional shortage areas in Palm Beach County.

NOTE: On Thursday November 3, 2011, the list of designated HPSAs was updated to reflect the publication of the Federal Register Notice with the list of designated HPSAs as of September 1, 2011. HPSAs that were designated after September 1, 2011 are considered designated even though they are not on the federal register listing; HPSAs that have been placed in "proposed for withdrawal" or "no new data" status since September 1, 2011 will remain in that status until the publication of the next federal register notice. If there are any questions about the status of a particular HPSA or area, we recommend that you contact the state primary care office in your state; a listing can be obtained at <http://bhpr.hrsa.gov/shortage/hpsas/primarycareoffices.html>.

Notes: Satellite sites of Comprehensive Health Centers automatically assume the HPSA score of the affiliated grantee. They are not listed separately.

FEDERAL MEDICALLY UNDERSERVED AREAS/POPULATIONS

Medically Underserved Areas (MUAs)/Populations (MUPs) are designated by Health Resources Service Administration (HRSA) as areas or populations having: too few primary care providers, high infant mortality, high poverty and/or high elderly population. An Index of Medical Underservice (IMU) uses weighted values for different factors to determine the score.

Medically Underserved Populations (MUPs) are comprised of groups of individuals who face economic, cultural or linguistic barriers to health care. Medically Underserved Areas (MUAs) are a whole county or a group of contiguous counties, a group of county or civil divisions or a group of urban census tracts in which residents have a shortage of personal health services.³³

³³ Health Resources and Services Administration

Table 136 shows the number and percent of uninsured individuals, by race and ethnicity and place of birth, in Palm Beach and Florida. In Palm Beach County, the number of uninsured Black individuals (33.8%) was nearly double the percentage of uninsured White individuals. The percentage of Hispanic or Latino individuals was 38.3% compared to 11.6% of 'White alone, not Hispanic or Latino'. Nearly 42% of foreign born individuals in the county were uninsured compared to the 14.6% who were native born.

Table 136: Health Insurance Coverage by Race, by Place of Birth, Palm Beach, 2010

	Palm Beach			Florida
	Total	Number Uninsured	Percent Uninsured	Percent Uninsured
RACE AND HISPANIC OR LATINO ORIGIN				
One Race	N	N	N	21.3%
White alone	1,005,891	174,749	17.4%	19.5%

Table 137 shows the number and percent of uninsured individuals, by educational attainment, employment status and household income in Palm Beach and Florida. The percentage of uninsured individuals with less than a high school diploma was 41.6% compared to 8.5% who have a bachelor's degree or higher. Over half (53.8%) of unemployed individuals in the county are uninsured. The percentage of uninsured was highest among households in the \$25,000 - \$49,999 income bracket (29.4%), followed by households in the under \$25,000 income bracket (28.3%).

Table 137: Health Insurance Coverage by Educational Attainment and Employment Status and Household Income, Palm Beach, 2010

	Palm Beach			Florida
	Total	Number Uninsured	Percent Uninsured	Percent Uninsured
EDUCATIONAL ATTAINMENT				
Civilian noninstitutionalized population 25 years and older	940,612	191,630	20.4%	21.6%
Less than high school graduate	119,025	49,494	41.6%	34.8%
High school graduate, GED, or alternative	250,476	64,771	25.9%	26.1%
Some college or associate's degree	270,494	51,914	19.2%	19.9%
Bachelor's degree or higher	300,617	25,451	8.5%	11.1%
EMPLOYMENT STATUS				
Civilian noninstitutionalized population 18 years and older	1,045,229	234,288	22.4%	23.6%
In labor force	661,013	188,130	28.5%	28.7%
Employed	573,006	140,777	24.6%	24.7%

Florida KidCare

Florida Kidcare is health insurance offered by the state of Florida for individuals up to 18 years, even if one or both parents are employed. The four parts of Florida KidCare for which one may be eligible are: MediKids, Healthy Kids, Children’s Medical Services Network and Medicaid.³⁴

Table 138 shows the percentage of children under 5 covered by KidCare. The percentage enrolled in Palm Beach (3.3%), slightly higher than the percentage in Florida (2.9%).

Table 138: Children < 5 covered by KidCare (Medikids + Medicaid), Palm Beach, Florida, 2008, 2009, 2010

	Number of Children covered by Kidcare			Number of Population 0-4			Rate Percent		
	2008	2009	2010	2008	2009	2010	2008	2009	2010

SAFETY NET

Safety net providers are generally non-profit, consumer directed health care centers whose mission is to provide high quality, cost-effective and comprehensive primary and preventive care to medically underserved and uninsured people. These organizations serve low income, working families, the uninsured and other high risk populations, such as homeless, migrant farm workers, isolated rural families, poor women, children and the elderly.

These centers have chosen to focus on wellness and prevention, which are key to cost savings in health care system. Through innovative approaches and interventions in community outreach,

³⁵ Health Care District of Palm Beach County, www.hcdpbc.org

patient education and prevention, these health centers also strive to teach their patients to take responsibility for their own health.

Federally Qualified Health Centers (FQHC), Federally Qualified Health Center Look-Alikes (FQHC Look-Alikes) are supported by Health Resources and Service Administration (HRSA) and aim to provide primary health care services to underserved and vulnerable populations. The health centers serve populations with limited access to health care including: low income populations, the uninsured, individuals with language barriers, migrant and seasonal farmworkers, the homeless, and individuals living in public housing.³⁶ FQHCs and FQHC Look-Alikes may include community health centers, migrant health centers, Healthcare for the Homeless programs, and public housing primary care programs. These organizations play an instrumental role in filling critical gaps in health care.

The Palm Beach County Health Department

The Palm Beach County Health Department is an essential part of the safety net in the county. Their vision is “a healthier future for the people of Florida” and their mission is, “To protect and promote the health of all residents and visitors in Palm Beach County.” The Palm Beach County Health Department has been in existence for 50 years and is considered to be a model agency for the State of Florida and many other states throughout the country. The health department has a wide range of programs including, disease prevention and control, environmental health and engineering, school health and health education. Varied innovative programs include: free immunizations for children, child care education, quality assurance of air and water, testing and monitoring for potential health epidemics and emergency threats.

The Palm Beach County Health Department has health centers spread throughout the county. C. L. Brumback (Belle Glade) Health Center, Delray Beach Health Center, Jupiter Health Center, Lantana Lake Worth Health Center, Northeast (Riviera Beach) Health Center, West Palm Beach Health Center and Pahokee – Glades Health Center and Clinic. Health centers are staffed by a professional team of health providers, including physicians, physician assistants, advanced registered nurse practitioners, nurses, nutritionists and health support staff.

The Division of Clinical Health Services plans and coordinates primary and preventive managed health care services for residents who meet eligibility requirements. The Community Health Division staff is responsible for monitoring the implementation of the essential public health services and its various activities. The Environmental Health Division is charged with monitoring air quality, drinking water, and chemical laboratory testing among many other food and water borne investigations. Dental Health focuses on dental preventive care. According to recent figures, over 50,000 persons in Palm Beach County have benefited from this program. The Nutrition Services Department provides assessment, counseling and education related to nutrition.

The website provides some resources for residents including information about the locations and contact information of clinics as well as hours of operations and services offered. For more information, please visit with Palm Beach County Health Department’s website:
www.pbchd.com

COMMUNITY PERSPECTIVE

THE LOCAL PUBLIC HEALTH SYSTEM ASSESSMENT

Brief Background, Purpose and Methodology

The Local Public Health System Assessment (LPHSA) Instrument is one of the three assessment instruments within the Centers for Disease Control's (CDC) National Public Health Performance Standards Program (NPHPSP). The NPHPSP is a national partnership initiative that began in 1998 and includes the following partner organizations: the CDC, the American Public Health Association, National Association of County and City Health Officials, The Association of State and Territorial Health Officials, The National Association of Local Boards of Health, and the Public Health Foundation.

This assessment tool is based on the framework of the Ten Essential Public Health Services, which provide standards for quality in public health and is identified by the CDC and other national public health entities, as being a necessary foundation for public health activity. The standards provide an optimal level of performance. Each performance standard represents the "gold standard" or "best-practice" in that area. The standards are intended to support a continual process of quality improvement for local health system partners.

The Ten Essential Public Health Services

1. Monitor Health Status to Identify Community Health Problems
2. Diagnose and Investigate Health Problems and Health Hazards in the Community
3. Inform, Educate, and Empower People about Health Issues
4. Mobilize Community Partnerships to Identify and Solve Health Problems
5. Develop Policies and Plans that Support Individual and Community Health Efforts
6. Enforce Laws and Regulations that Protect Health and Ensure Safety
7. Link People to Needed Personal Health Services and Assure the Provision of Health Care when Otherwise Unavailable
8. Assure a Competent Public and Personal Health Care Workforce
9. Evaluate Effectiveness, Accessibility, and Quality of Personal and Population-Based Health Services
10. Research for New Insights and Innovative Solutions to Health Problems

In March 2012 the Health Council of Southeast Florida facilitated two meetings to assess the performance of Palm Beach County's local public health system in comparison to a set of national standards using the Local Public Health System Assessment. The sessions were attended by key leaders and stakeholders representative of the broad spectrum of contributors in the local public health care system including public, private and voluntary entities. Attendees included representatives from various types of organizations that contribute to the delivery of health services in Palm Beach, including the local public health agency, community health centers, social service providers, the county school district, faith-based organizations, philanthropic organizations, local governmental agencies, and many others.

Participants were provided with an overview of the Essential Public Health Services, the goals and the purpose for completing the assessment. The group discussed the assessment and answered questions in reference to each of the Essential Public Health Services and its respective model standards. The discussion was facilitated by staff of the Health Council of Southeast Florida. Participants were asked to respond to questions related to each of the essential public health services and, as a group, come to a consensus regarding the level of activity in the community for each of the services using the scoring instrument in Figure 28. The answers were recorded manually and subsequently submitted electronically to the CDC for evaluation and results. The results herein are presented in the aggregate.

Results and Data Limitations of the Local Public Health System Assessment

The responses to the questions within the assessment are based upon processes that utilize input from diverse system participants with different experiences and perspectives. The gathering of information incorporates an element of subjectivity, which can be minimized through the use of particular assessment methods. Bear in mind that the assessment methods are not fully standardized and these differences may introduce an element of measurement error. Because of the inherent limitations noted, the results below and associated recommendations should be used only for quality and performance improvement purposes and should not be interpreted to reflect the capacity or performance of any single agency or organization.

How well did the Palm Beach County's local public health system perform the ten Essential Public Health Services (EPHS)?

Table 142 below, provides an overview of Palm Beach local public health system's performance in each of the 10 Essential Public Health Services (EPHS). Each EPHS score is a composite value determined by the scores given to those activities that contribute to each Essential Service. These scores range from a minimum value of 0% (no activity is performed pursuant to the standards) to a maximum of 100% (all activities associated with the standards are performed at optimal levels).

Table 142: Summary of performance scores by Essential Public Health Service (EPHS)

Essential Public Health Service		Score
1	Monitor Health Status To Identify Community Health Problems	66
2	Diagnose And Investigate Health Problems and Health Hazards	91
3	Inform, Educate, And Empower People about Health Issues	94
4	Mobilize Community Partnerships to Identify and Solve Health Problems	71
5	Develop Policies and Plans that Support Individual and Community Health Efforts	83
6	Enforce Laws and Regulations that Protect Health and Ensure Safety	92
7	Link People to Needed Personal Health Services and Assure the Provision of Health Care when Otherwise Unavailable	78
8	Assure a Competent Public and Personal Health Care Workforce	66
9	Evaluate Effectiveness, Accessibility, and Quality of Personal and Population-Based Health Services	63
10	Research for New Insights and Innovative Solutions to Health Problems	98
Overall Performance Score		80

Score Detail Methodology

The NPHPSP assessment instruments are developed using the Essential Public Health Services (EPHS) as a framework. Each Essential Public Health Service includes between 2-4 model standards that describe the key aspects of an optimally performing public health system. Each model standard is followed by assessment questions that serve as measures of performance. The ‘public health system’s’ response to these questions should indicate how well the model standard, which portrays the highest level of performance or "gold standard", is being met.

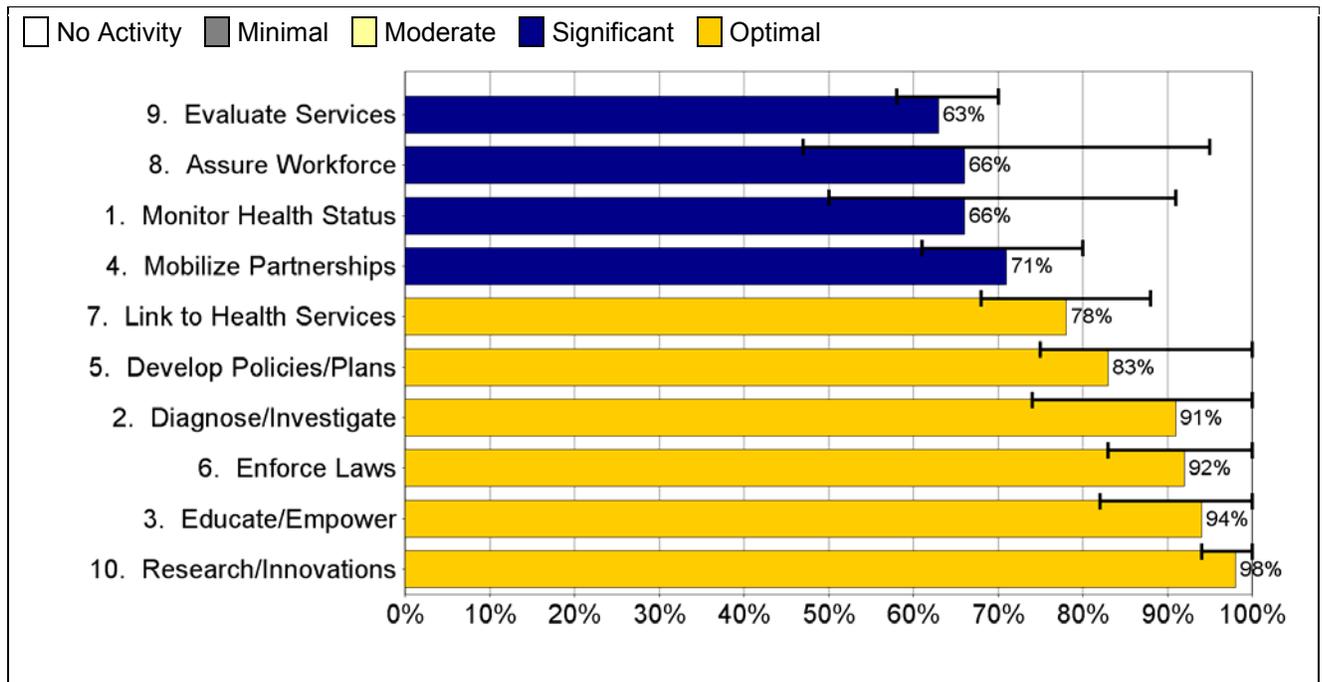

Each local public health system responds to the assessment questions using the options below. These same categories are used in this report to characterize levels of activity for Essential Services and model standards.

Figure 27: Local Public Health System Scoring Instrument

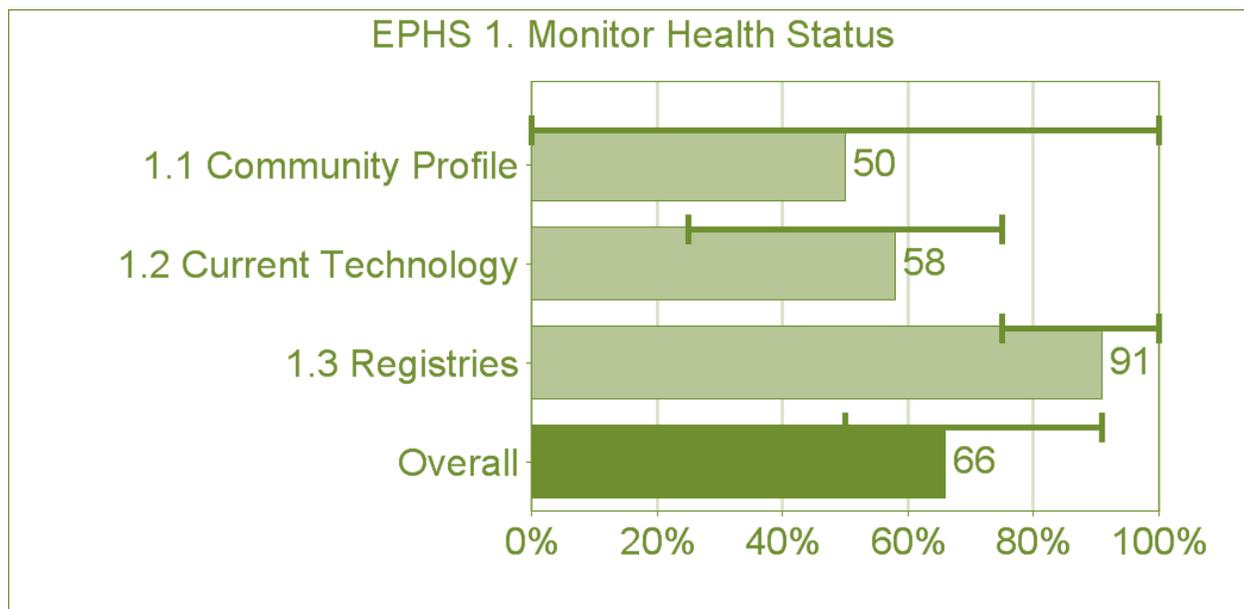

NO ACTIVITY	0% or absolutely no activity.
MINIMAL ACTIVITY	Greater than zero, but no more than 25% of the activity described within the question is met.
MODERATE ACTIVITY	Greater than 25%, but no more than 50% of the activity described within the question is met.
SIGNIFICANT ACTIVITY	Greater than 50%, but no more than 75% of the activity described within the question is met.
OPTIMAL ACTIVITY	Greater than 75% of the activity described within the question is met.

Figure 28 shows the results from Palm Beach’s LPHSA, ranked from high to low and color-coded to indicate level of activity. The local public health system in Palm Beach was scored to have optimal or significant activity in all 10 of the Essential Services of Public Health.

Figure 28: Rank ordered performance scores for each Essential Service, by level of activity

Essential Public Service #1: Monitor Health of the Community

According to the LPHSA our community has **significant activity** related to this activity.

Best Practices in Essential Service #1 are identified as:

- Conduct community health assessments to identify public health risks and inform public health planning.
- Review available health data to determine most prevalent health problem afflicting community.
- Identify groups of people who might have a greater chance of becoming ill because of where they live or work, because of social economic situations, or because they have behaviors that can cause health problems.
- Develop community health profile to educate community and community leaders about public health promotion.
- Establish website to provide community information about persistent health problems within community and how to prevent these problems.

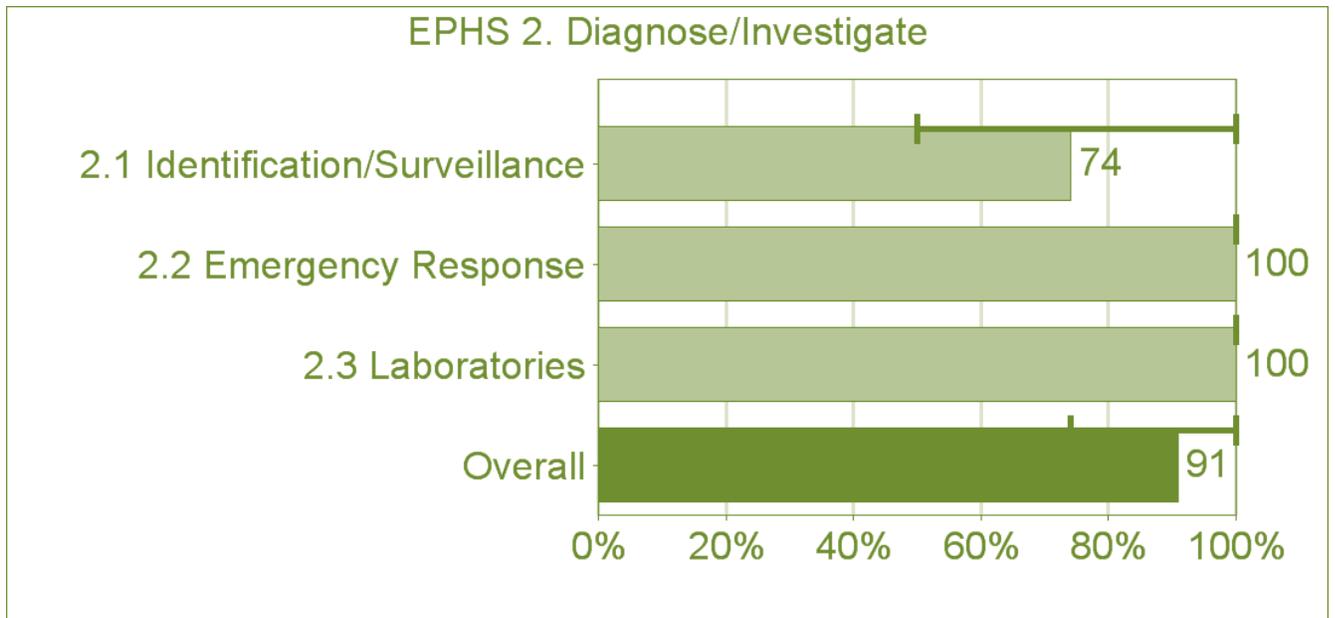

Our *Local Public Health System Strengths* in this area were:

- Maintenance and use of population registries

Our *Local Public Health System* has the following opportunities to improve:

- Complete and use Community Health Assessment (CHA) and Community Health Improvement Plan (CHIP)

Essential Public Service #2: Diagnose and Investigate Community Health Problems and Hazards in the Community

According to the LPHSA our community **optimally** meets this standard.

Best Practices in Essential Service #2 are identified as:

- Investigate food borne outbreaks.
- Communicate serious health threats to community in timely manner.
- Develop emergency response plans for public health emergencies.
- Respond to public health emergencies including disease outbreaks or terrorism.
- Ensure access to laboratory with capacity for sampling.

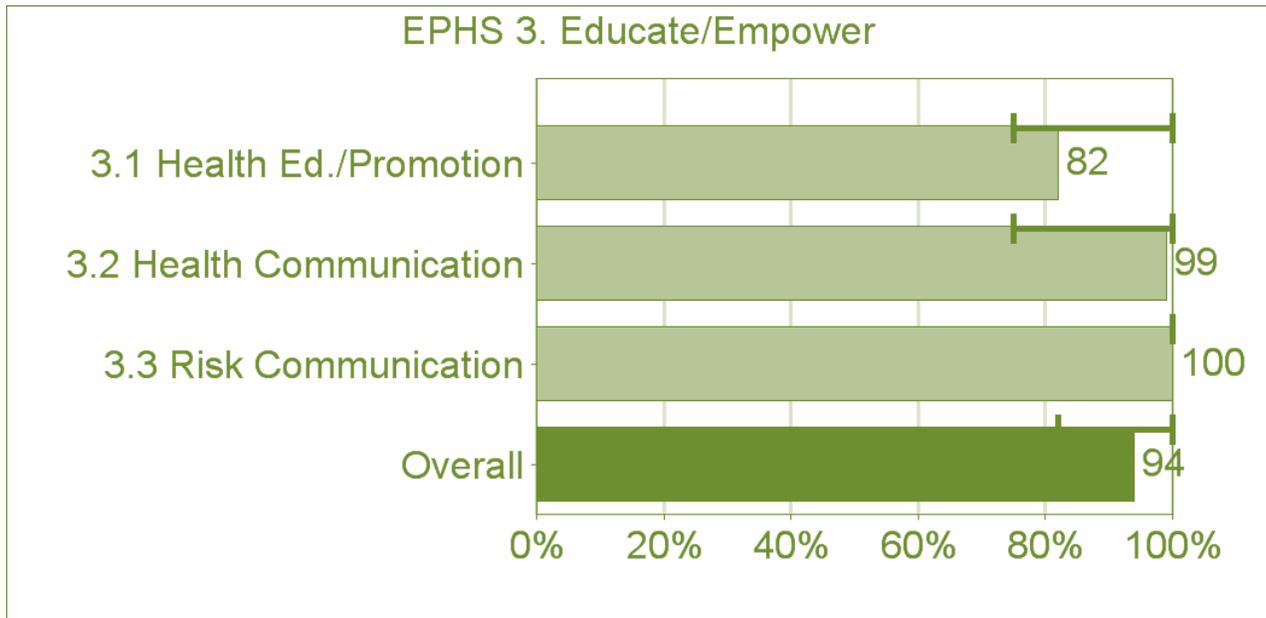

Our Local Public Health System Strengths in this area were:

- Investigation and response to public health threats and emergencies
- Diagnosis and investigation of health problems and health hazards
- Provision and availability of laboratory support for investigation of health threats

Our Local Public Health System has the following opportunity to improve:

- Increase resources to support surveillance and investigation of activities

Essential Public Health Service #3: Inform, Educate and Empower

According to the LPHSA our community was scored to have **optimal activity** in this Essential Service.

Best Practices in Essential Service #3 are identified as:

- Provide health information that is easy for people to get and understand.
- Develop and provide community with information on seasonal and ongoing public health issues including influenza and West Nile Virus prevention, cancer and obesity prevention, and bioterrorism preparedness.
- Provide health promotion activities like cholesterol screening, blood pressure screening, and flu clinics.
- Support legislation that will improve the community's health, such as clean indoor air legislation.

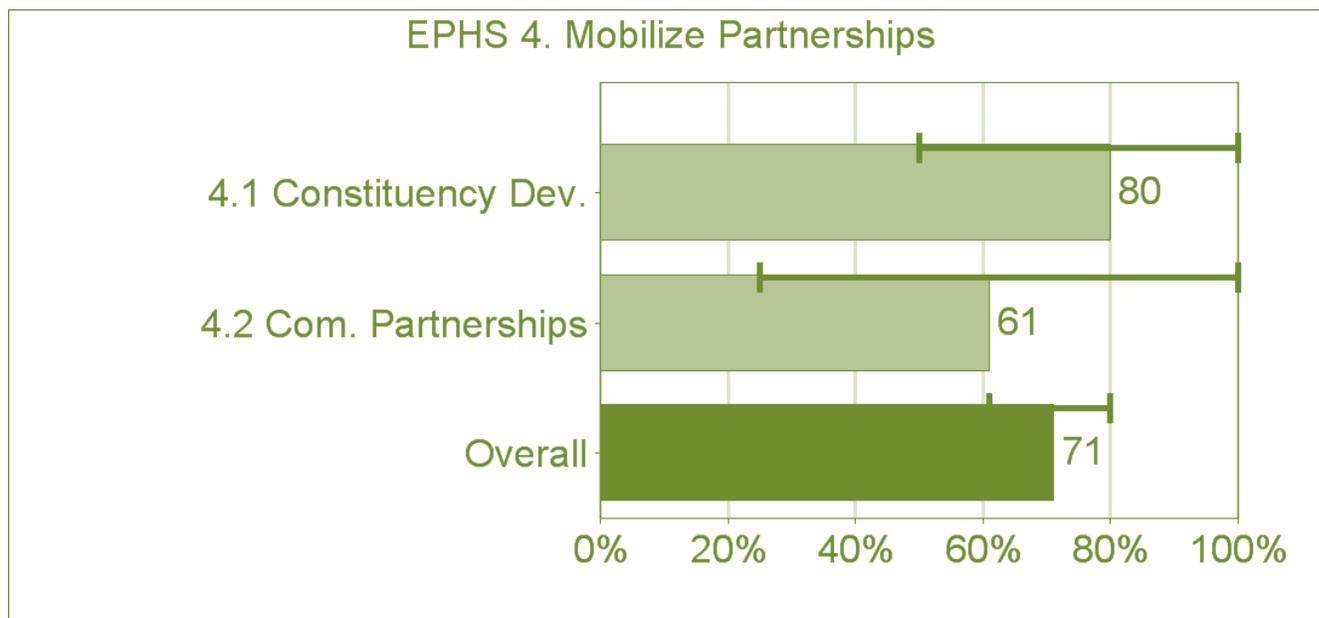

Our Local Public Health System Strengths in this area were:

- Health education and promotion
- Health communication
- Risk communication

Our Local Public Health System has the following opportunity to improve:

- Increase activity around health education and health promotion campaigns

Essential Public Health Service # 4: Mobilize Community Partners

According to the LPHSA our community has **significant activity** related to this standard.

Best Practices in Essential Service #4 are identified as:

- Identifying and convening other health organizations (e.g., hospital, CBO's) within community to develop community-wide health improvement plan.
- Coordinating agreements between other community health organizations to determine specific roles and responsibilities toward improving community's health.
- Expanding partnerships among groups and associations to improve community health.

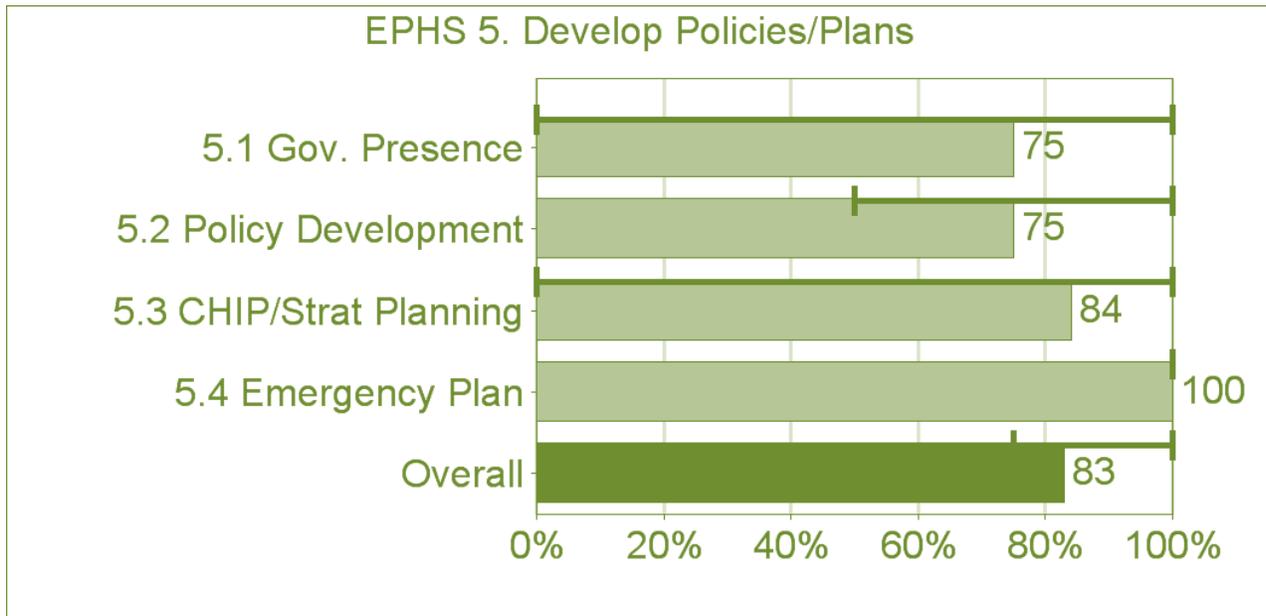

Our *Local Public Health System Strengths* in this area were:

- Having and maintaining a directory of organizations that comprise the local public health system
- Identifying of key constituents

Our *Local Public Health System* has the following opportunities to improve:

- Improve communication strategies to build awareness of public health
- Review community partnerships and strategic alliances

Essential Public Service #5: Policy Development

According to the LPHSA our community was scored to have **optimal activity** in this Essential Service.

Best Practices in Essential Service #5 are identified as:

- Advocate for policies that will improve public health, such as clean indoor air law.
- Testify at public hearings in support of legislation that will improve public health.

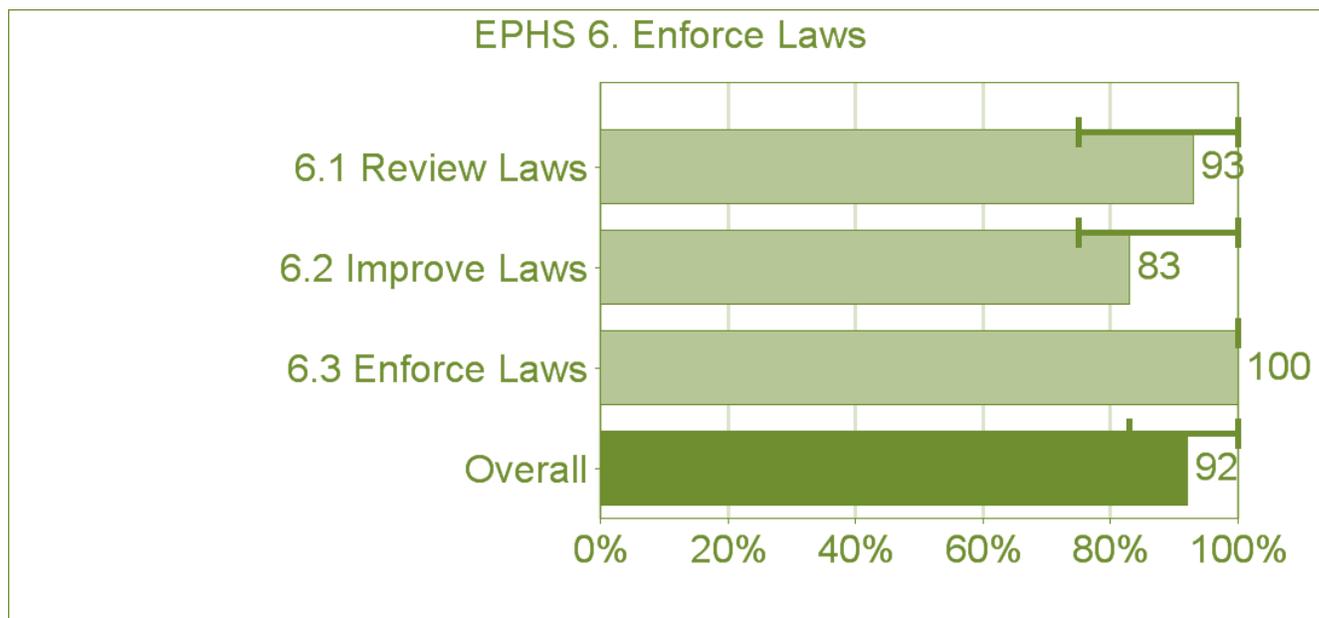

Our *Local Public Health System Strengths* in this area were:

- Planning for public health emergencies
- Having governmental local public health practice

Our *Local Public Health System* has the following opportunity to improve:

- Increase collaboration between local health department and the state health department and other state partners

Essential Public Service #6: Enforce Laws and Regulations

According to the LPHSA our community was scored to have **optimal activity** in this Essential Service.

Best Practices in Essential Services #6 are identifies as:

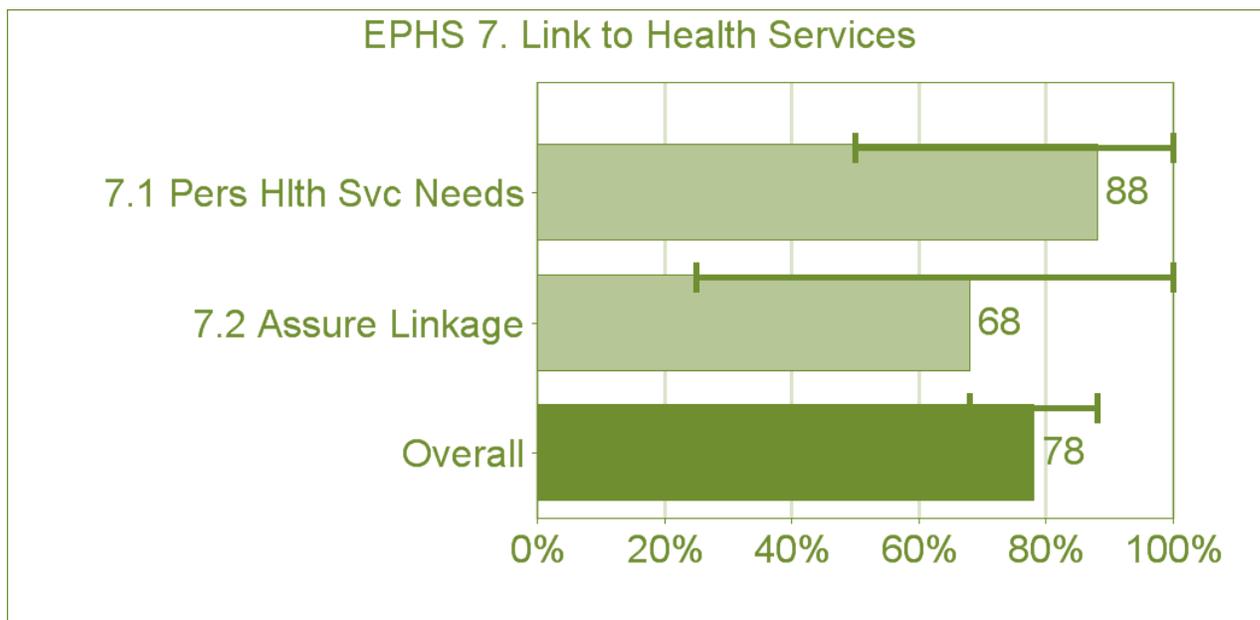

- Enforce public health code.
- Protect drinking water supplies.
- Conduct timely inspections (i.e., restaurants, tattoo parlors, campgrounds, day care)
- Conduct timely environmental inspections (i.e. septic systems, pools, lead abatement)
- Follow up on hazardous environmental exposures and preventable injuries.
- Serve quarantine/isolation order to individual infected with infectious diseases such as Tuberculosis, SARS, or Smallpox.
- Assist in revising outdated public health laws and development of proposed public health legislation.

Our *Local Public Health System Strengths* in this area were:

- Review and evaluation of laws, regulations and ordinances
- Involvement in the improvement of laws, regulations and ordinances
- Enforcement of laws, regulations and ordinances

There were not any areas for improvement identified with regard to this Essential Service.

Essential Public Service #7: Link People to Health Services

According to the LPHSA our community was scored to have **optimal activity** in this Essential Service.

Best Practices in Essential Services #7 are identified as:

- Establish and maintain referral network for provision of personal health services to ensure that people who cannot afford health care get the care they need.
- Distribute mass quantities of antibiotics or vaccines in event of widespread disease outbreak (e.g., pandemic flu) or bioterror-related attack (i.e., smallpox or anthrax)
- Identify and locate underserved populations such as low-income families, minorities, and the uninsured.
- Provide culturally and language appropriate materials so that special groups of people can be linked with preventive services.

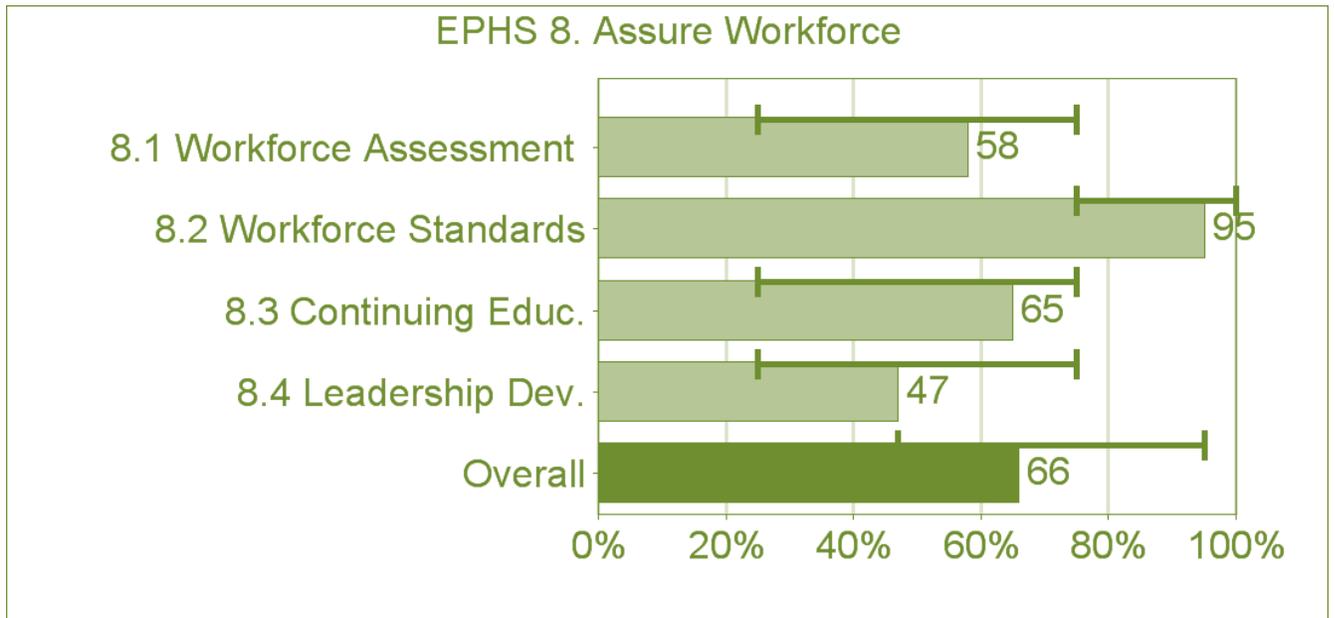

Our Local Public Health System Strengths in this area were:

- Identification of populations with barriers to personal health services

Our Local Public Health System has the following opportunities to improve:

- Link populations to needed personal health services
- Coordination of personal and social services

Essential Public Service #8: Assure a Competent Workforce

According to the LPHSA our community has **significant activity** related to this standard.

Best practices in Essential Service #8 are identified as:

- Fund professional development and opportunities for staff.
- Test emergency response plan during mock event to evaluate performance.

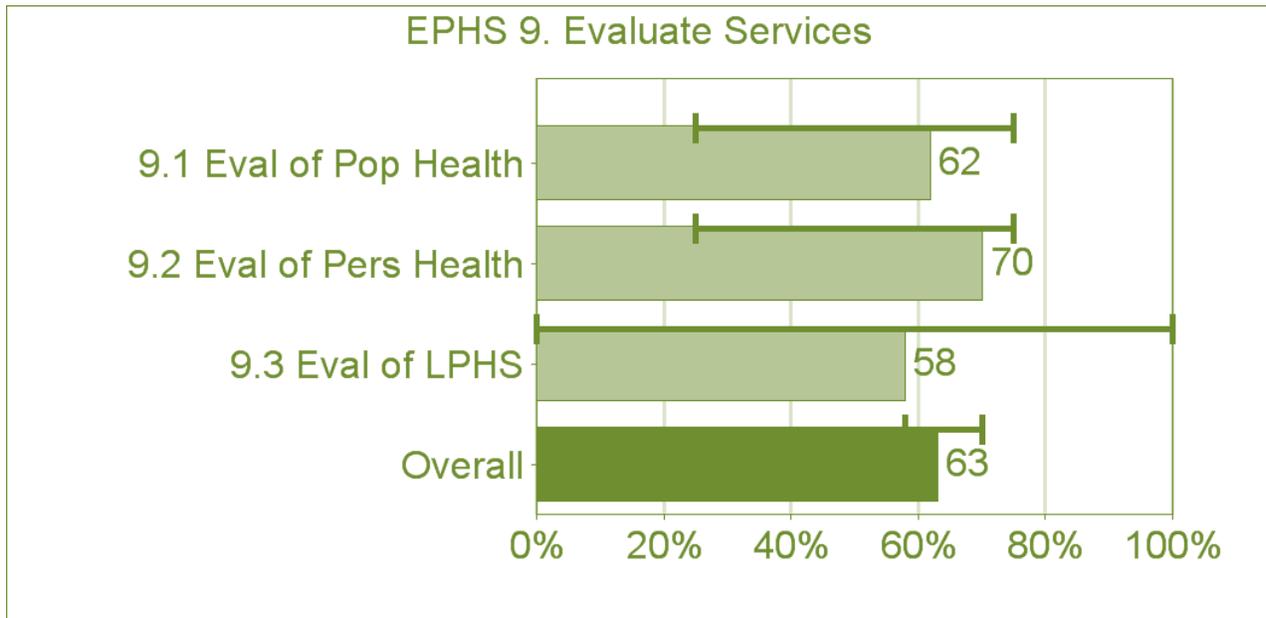

Our Local Public Health System Strengths in this area were:

- Establishment of public health workforce standards

Our Local Public Health System was identified to have the following opportunities to improve:

- Dissemination of results of the workforce assessments and gap analysis
- Provision of opportunities for developing core public health competencies
- Public health leadership development including collaborative leadership, provision of leadership opportunities for individuals and organizations and recruitment and retention of new and diverse leaders

Essential Public Service #9: Evaluate Services

According to the LPHSA our community **significantly** met this standard.

Best Practices in Essential Service #9 are identified as:

- Monitor trends in disease rates to assess effectiveness of disease prevention activities.
- Monitor trends in risk factors (i.e., unprotected sex, drinking-and-driving, smoking) to assess effectiveness of health promotion activities.
- Evaluate effectiveness of public health programs and services.

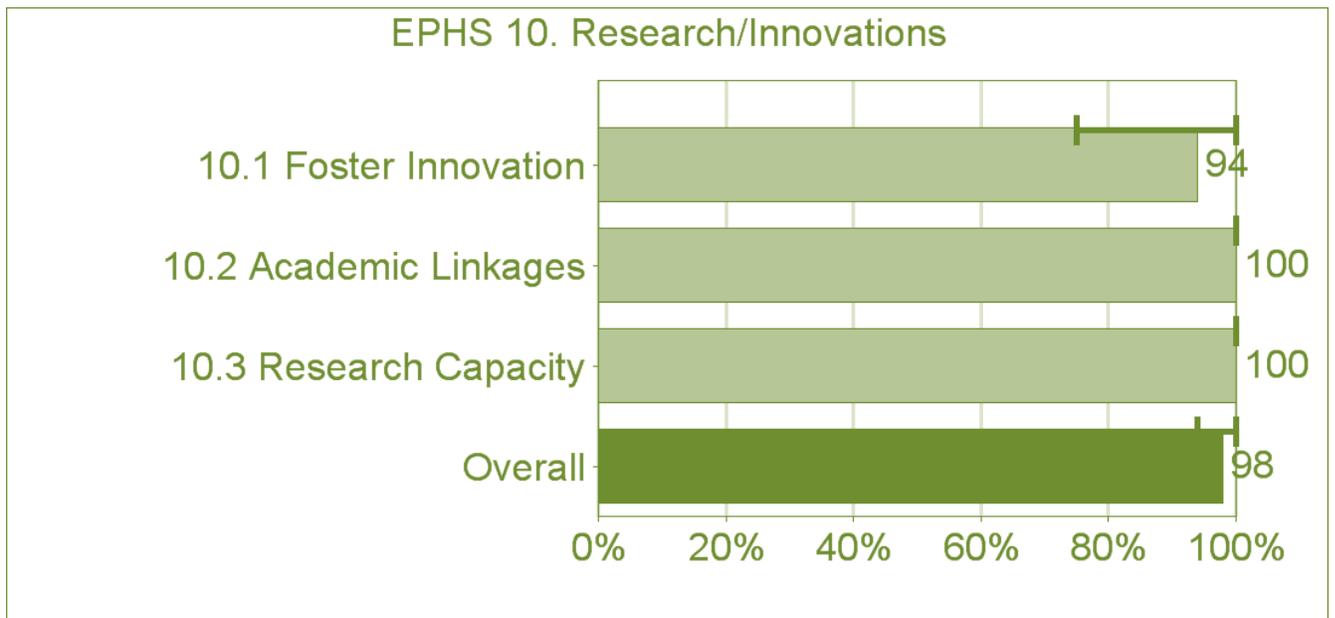

Our *Local Public Health System Strengths* in this area were:

- Identification of gaps in the provision of population-based health services
- Identification of community organizations that contribute to the Essential Public health Services

Our *Local Public Health System* has an opportunity to improve:

- Use of population based health service evaluations
- Periodic evaluation of the local public health system

Essential Public Service #10: Research for New Insights

According to the LPHSA our community has **optimal activity** with related to this standard.

Best Practices in Essential Service #10 are identified as:

- Monitor rapidly changing disease prevention research and health promotion research.
- Revise practices in order to remain current with recommended practices resulting from evidence-based research.

Our Local Public Health System Strengths in this area were:

- Fostering innovation
- Linkages with institutions of higher learning and research institutions
- Capacity to initiate and participate in research

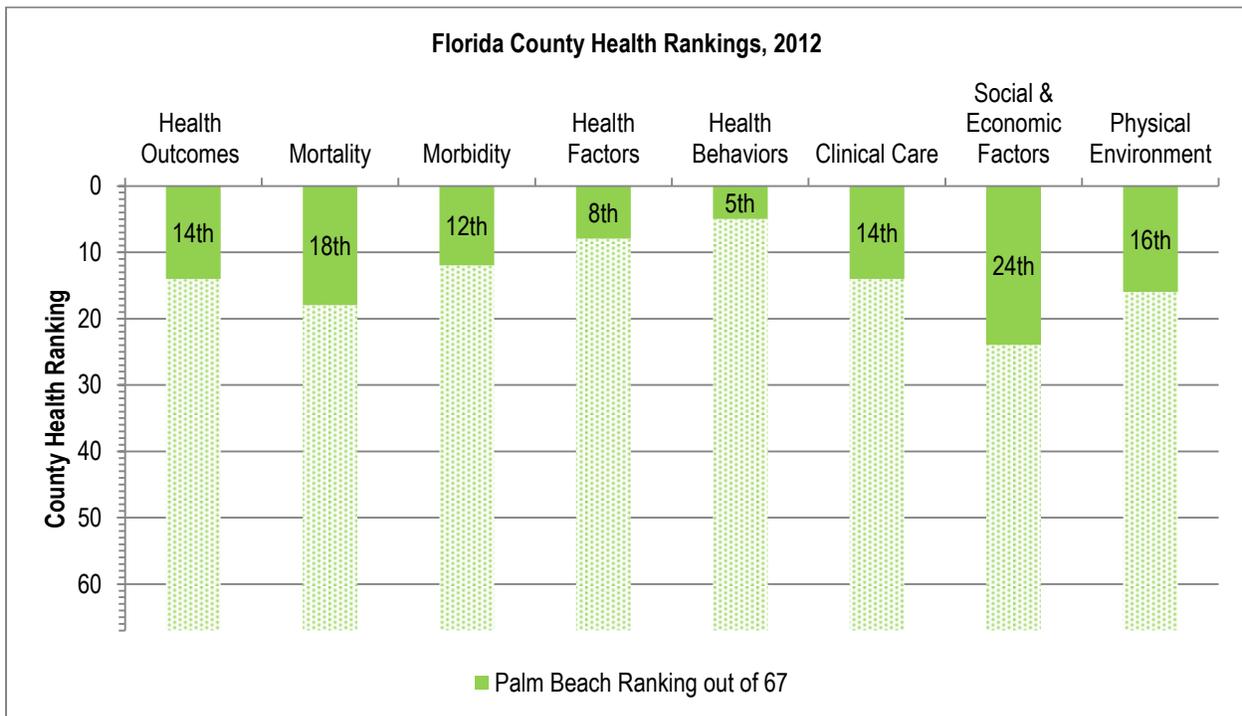

This was the highest scoring Essential Public Health Service in Palm Beach County. There were no opportunities for improvement identified.

COUNTY HEALTH RANKINGS

Each year, since 2010, nearly every county in the country is given a global health rank, through a project called *County Health Rankings* established by The Robert Wood Johnson Foundation and the University of Wisconsin Population Institute. The rankings are based on strict measures in four distinct health domains: health behaviors, clinical care, social and economic factors and physical environment. “The *Rankings* are an annual check-up that highlights the healthiest and least healthy counties in every state, as well as those factors that influence health, outside of the doctor’s office. The *Rankings* highlight the importance of critical factors such as education rates, income levels, and access to healthy foods, as well as access to medical care, in influencing how long and how well people live.”³⁷

Figure 29 shows the Palm Beach County’s health ranking for 2012. The 67 counties in Florida are ranked 1-67 (1 is the highest) on various components contributing to health status. Palm Beach County’s highest ranking was in health behaviors where it received a ranking of 5 out of 67, followed by health factors ranked 8, and morbidity ranked 12th. Appendix D provides more specific information on the ranking process.

³⁷ 2012 Press Release “Healthiest and Least Healthy Counties Ranked in Every State 2012 County Health Rankings Show What Influences How Healthy Residents Are, How Long They Live” http://www.countyhealthrankings.org/sites/default/files/CHRR%20national%20release_0.pdf

CONCLUSION

Communities face the challenge of balancing the desire to provide residents access to quality health and human services with decreasing resources and increasing demand. This community assessment will enable Palm Beach County to better understand the needs of its community and aid in planning for services in an effort to most efficiently use its resources and improve the health of its residents.

PALM BEACH COUNTY
COMMUNITY HEALTH ASSESSMENT
COMMUNITY PERSPECTIVE

Prepared by: Health Council of Southeast Florida

INTRODUCTION

The second phase of Palm Beach County's Community Health Assessment consisted of the collection and synthesis of information for the Community Perspective. The data contained herein is qualitative, primary data – it was obtained directly from the source and has not been previously published. This information was collected through focus groups with members of the community and through an online survey of providers and stakeholders in the community.

The target populations, agencies, providers and stakeholders were identified and engaged by the Health Council of Southeast Florida (HCSEF).

FOCUS GROUPS

COMMUNITY FOCUS GROUPS - METHODOLOGY

Seven (7) focus groups with members of the community were conducted in July 2012. The dates, locations, times are in Table 143. The purpose of the focus groups was to get input from certain underserved and vulnerable populations in the community. These were identified at the outset of data collection process. The target populations included: certain geographic sectors within the county, Creole and Spanish-speaking individuals, the elderly, males and uninsured and underinsured individuals. HCSEF enlisted the assistance of several agencies within the community to recruit focus group participants. A matrix of the target populations can be seen in Table 144.

Each focus group was led by a skilled facilitator, accompanied by a note-taker. Not including the introduction and overview, each group lasted approximately 60 minutes. Five (5) focus groups were conducted in English, one (1) was conducted in Haitian Creole and one (1) was conducted in Spanish. A total of 76 individuals participated in the group, with between 3 – 19 individuals per group. Refreshments were provided at each session and participants were incentivized to participate with \$15-\$25 Walmart or Winn-Dixie gift cards, which were distributed at the end of the session. Each participant completed a demographic questionnaire prior at the start of the focus group and an aggregation of this information can be seen in the Tables 145-153, below. The participants were asked a series of 10 pre-determined, open-ended questions. These questions can be referenced in Appendix E. The questions sought to gain insight, not only on individual's interaction and perception of the health care system in the community, but also to glean insight on health behaviors, attitudes and influences. All participants were informed at the beginning of the session that the session was being audiotaped. Participants were assured that names would not be attributed to the responses given.

Methodology Notes:

The geographical area known as "The Glades" in the western part of the county was oversampled due to the pre-existing knowledge that this community has a significant underserved population.

The focus group at St. George's Community Center had three participants, though this is less than the ideal number of individuals the focus groups was conducted given that the individuals served at the Center are often homeless, a target population which is typically very challenging to reach in this capacity.

Participants in a number of the focus groups faced challenges filling out the demographic forms, which is believed to be due the their literacy level. HCSEF facilitators assisted participants, when it was recognized that help was needed, in completing the forms, often by reading the questions and recording the answer on the sheet based on the response.

The 'no answer' categories are a catch all for those who preferred not to answer as well as those who left the field blank. It is hypothesized that many of the 'no answers' are a result of challenges with literacy.

Table 143: Location, Date, Time and Number of Participants in Focus Groups

Site	Date	Time	# of Participants
Adopt-a-Family	7/17/2012	6:00pm	14

\$20,001 - \$40,000	4	5.3%
\$40,001 - or more	0	0.0%
Prefer not to answer	23	30.3%

Health Behavior / Health Attitude Questions

The first several questions in the sessions dealt with health behaviors, health attitudes, perceptions about health and influences on health. Understanding the motivations and underlying thought processes is vital to planning for action, addressing health issues and improving health status within a community

HEALTH

Focus group participants were asked, *“What does health mean to you?”*

Several themes emerged from the responses. Participants talked about health being central to life; when you have health, you have life. Specifically, it was noted that health is very important to survive, and with health one can do anything. Participants spoke about the goal to live a long life, *“being able to see generations over a long time.”* One individual stated that *“without health there is no peace in life.”*

Additionally, participants expressed the notion that if you are healthy, you live longer, think better and have more vitality and energy. *“It’s very important”, “it’s the main thing” and “it’s gold”* were repeated sentiments of many participants.

It was also noted that health is not *“something you can’t take for granted”* and that it can be taken from you very quickly. Participants expressed that a person is healthy, everything functions “well.”

Health to others meant the ability to bear children and to have healthy children. Participants noted that *“without health [one] cannot take care of children.”* For others, *“healthy means to be happy and to see your grandkids grow up.”*

Participants also talked about health meaning to take care of oneself. More specifically, they mentioned eating right and working out, and *“watch[ing] what I eat and drink.”* Others spoke of the importance of self-management of chronic conditions, such as frequently measuring their blood sugar with diabetes.

Keeping positive and watching stress levels were also mentioned.

For some participants, health meant focusing on more basic needs such as showering and keeping oneself clean.

Another theme that emerged was related to prevention and health behaviors. Respondents specifically noted: keeping up with appointments, going to the doctor when you feel well, and not waiting until you are sick – being proactive.

UNHEALTHY

Participants were then asked, *“What does unhealthy mean to you?”*

Several themes emerged in response to this question. For some, unhealthy meant simply, doing something to your body that you’re not supposed to or that *“something is wrong.”*

Others mentioned chronic conditions such as diabetes and high blood pressure.

As with health, being unhealthy for many was seen as a central component to life. It was recognized that being unhealthy can affect one’s well-being; mentally, physically and emotionally and that one has to be well in these area to function socially. As noted by one participant, unhealthy is when *“my body and mind are not in harmony.”* Being unhealthy was seen to be a *“dark place”* and thought to keep one unhappy and to be *“very depressing.”* Others alluded to being unhealthy mentally, particularly after a traumatic event in their lives and the need *“to grab your boots by the laces”* and lift yourself up.

It was noted that there are many annoyances when you are not feeling well. One participant noted that being unhealthy is the *“#1 circumstance we are facing.”*

Participants acknowledged that other things, such as money, do not matter if you are unhealthy.

There was significant discussion about the repercussions of being unhealthy. Specifically, *“stress”, “lots of bills”* and the fear that *“trouble lies ahead”* were mentioned. Unhealthy to some meant not having the energy to do anything, and for others it meant sadness for the family. For others, unhealthy meant being incapacitated and unable to work.

There was significant discussion and mention of actions and behaviors related to, or causing one to be unhealthy. *“Not going to the doctor”* and *“not taking medications as you are supposed to and as were prescribed to you”* were specifically noted.

Unhealthy for others meant not eating “right” and not exercising, *“I think unhealthy is when you don’t take care of yourself... when you don’t eat right, when you don’t exercise.”* One participant noted that even for people on a budget there are alternatives to eating unhealthy food and that people have choices about what they eat. The same participant noted that *“we can grow our food, but that’s time-consuming and not practical for a lot of people.”* Another participant noted that unhealthy goes beyond diet, and stated, unhealthy *“means not eating right, not taking care of yourself – letting things get out of hand if you are hurt– being real dirty – more than just what you put in your body.”*

There was discussion about needing education, *“We just need to be able to have the education necessary to know what health is all about...and then we can make decisions from there. We are bombarded by what the television tells us what to eat, what to watch, what we do, when we sleep, etc...we are robotic. We are hypnotized by the TV. Education is key.”*

TAKING CARE OF HEALTH

Focus group participants were asked *“How do you take care of your health?”*

The importance of taking care of one’s health was recognized, as one participant phrased it, *“Your body is the temple and if you don’t take care of it, you are [expletive] out of luck.”*

There was considerable mention of diet and exercise. Participants specifically mentioned the importance of eating lots of vegetables, fruits and grains. They also noted different types of exercises. One said that her exercise consisted of *“walk[ing] the hills daily at the Dike.”* Others ride their bicycles, while others walk and swim. Exercise was said to help one relax, feel light and relieve stress. One participant’s advice was to *“drink a lot of water and don’t worry.”* Eating and drinking in moderation was mentioned. One participant noted, *“I eat oranges and applies... of course, there is a [little] beer in there.”*

Spirituality and praying were noted by participants. One participant noted *“I take yoga, it keeps me calm....”* Many mentioned the importance of prayer.

Some participants noted the importance of one’s surrounding in taking care of their health. Keeping a clean house was noted as well as keeping the streets clean in the community. Clean air was as noted to be important. The burning of sugarcane and use of pesticides in the Glades area were attributed to keeping people sick with allergies and asthma.

Participants discussed behaviors and actions they took to take care of their health. Taking medications, regular visits to the doctor and psychiatrist and self-management of health and conditions were all mentioned.

For some, taking care of their health meant focusing on their personal hygiene, including taking daily baths, brushing their teeth, getting rid of germs and breathing in fresh air (as opposed to air conditioned air). One individual noted, *“eating right, staying clean and clean[ing] your teeth because that is so important. Dental health is critical...to prevent gum disease that can ultimately lead to heart disease.”*

Others noted that they attempt to take care of their health by keeping a positive outlook, *“being jovial”* and avoiding depression. Maintaining a *“healthy state of mind”* was mentioned.

Educating oneself was mentioned as another way to take care of health.

One individual commented *“I come to the health department every day – Monday through Friday”* in response to how they take care of their health and others reported going to the emergency room *“when things get really bad.”* One participant noted that she was pregnant, so she *“goes to the doctor on a regular basis.”*

Discussion about the difficulty in taking care of one’s health also arose. One respondent

discussed being turned away from the emergency room and told to find a primary care doctor after returning repeatedly for a recurring pain. Others reported having medications sent from relatives in other countries, where they can be purchased more affordably.

One participant noted challenges in taking *“I don’t take care of my health because I don’t have Medicaid or Medicare...Medically Needy puts me at a standstill.”*

INFLUENCES ON WHAT YOU DO ABOUT YOUR HEALTH

Participants were then asked, *“Who or what influences what you do about your health?”*

Family emerged as a main theme including the following responses: *“my husband”, “my spouse reminds me to do to the doctor”, “my family”, “my children...I want to be able to take care of them”, “my granddaughter encouraged me to get off drugs”, “I learn from my parents”, “my dad”, “my grandchildren remind me to take my medicine.”* One participant shared the she and her husband decided to not eat after 7pm and the start eating healthier as a family. One’s upbringing and how [they] were raised was also mentioned as influential.

Personal accountability, *“me, myself and I”* and *“I have to take care of myself, otherwise not one else will do it for me”* was also mentioned as contributing to what participants do about their health.

Fear of getting sick, fear of needles and getting shots, fear of going to the hospital and fear of dying were discussed as influencing what people do about their health.

Furthermore, another noted that knowing that they don’t have protection from health insurance influences them to stay healthy.

Other influences mentioned were “friends” and “learning from television.”

INFLUENCES ON WHAT YOU THINK ABOUT HEALTH

Participants were also asked, “*Who or what influences the way you think about health?*”

Family, specifically, parents and grandparents were mentioned. One individual shared that they were motivated to stay healthy because they see their mother who is in her 70s and is healthy and still working; another mentioned motivation from a 96 year old aunt who is “*still going strong.*” One participant shared that seeing their parents take pills motivated them to be healthy. Another commented that thinking about who their children were going to be with if something happened to them influenced their thinking.

Personal influence was noted several times; “*Your body tells you what is going on.*” Others shared that being healthy and not having medical problems motivated them to stay that way and take good care of themselves.

Previous experiences were noted to influence the way people thought about health. Others responded that without health insurance no one wants to get sick and that influences them to take good care of themselves.

The media, and specifically, Dr. Oz were mentioned as influences, though it was noted that the media can sometime send the wrong signals, particularly to children.

Participants mentioned the importance of getting your own information and reading books.

Some mentioned that doctors influenced what and how they think about health, though “*we never do what they say. They tell us we shouldn’t do something, but we do it anyhow.*”

Other influences included: the teachers at El Sol Community Resource Center, community outreach workers who knock on doors, churches through their health awareness activities, community health fairs that offer screenings and religion, “*the Man upstairs.*”

WHERE GET HEALTH CARE

Participants were asked *where they get health care- specifically do they have a place where they usually receive care and where they get physicals and check-ups.*

The overarching theme in response to this line of questioning was that it depended on what kind of coverage and insurance you have; it *“depends of what insurance you have, if you don’t have the right insurance you might not get seen by a doctor.”* Some participants mentioned not being able to get a check-up because they had turned 18 and were no longer eligible.

Among the responses was the hospital, one participant shared, *“I just go to the hospital, give them my name and let the bill float.”*

Some individuals with no payer source commented that they go to the emergency room. The health department clinic was mentioned, I go to the *“Health Department, I don’t have health insurance, so I have to come to the clinic... I thank God for it.”*

Some participants in the Riviera Beach area mentioned receiving care from mobile van that is parked outside on Tuesdays and Thursdays that provides services such as checking blood pressure.

It was mentioned that due to insurance coverage one participant had to travel to Miami to see a specialist and that was an issue due to gas and car repair.

Urgent care centers were mentioned, *“I use urgent care... it is open 24 hours a day and I do not wait a long time to be seen. I am out of there in 10 minutes”*, however they were thought to be expensive.

Participants noted frustration with needing to continually change providers due to insurance coverage issues.

Additionally, there was discussion about parents not having health care access though children do. Some respondents shared that they don’t have Medicaid for themselves or for their children.

The senior population reported receiving care at their doctor’s office; however they discussed the challenges with having several doctors who do not communicate with each other.

USE OF EMERGENCY DEPARTMENT

Participants asked, *"In what cases do you use the emergency room?"*

A few themes emerged in response to this question. Participants discussed use of the emergency room when they needed immediate attention. For example, when they were very sick, *"heart attack"*, had an accident or injuries, or if it was something they couldn't control.

Others mentioned using the emergency room for the effects of a chronic illness, *"I go when the gout flares up"* or having high blood pressure.

Other comments were related the time and day of needing care. *"It depends on what time of the day I get sick."* *"They tell you if something goes wrong on a Saturday or Sunday, then go to the ER, but I am terrified because I don't know my doctor."* Others talked about having a pain that prevented them from sleeping and others *"if you have severe pain during the night, then I would go."*

Others spoke of specific reasons they had used the emergency room in the past; *"If I'm having an asthma attack or a seizure, I'll go to the emergency room. Last week, I went for my back...it was gas, but I didn't know that. I go to the clinic and they send me to the ER."* Another shared, *"When my daughter was pregnant, her back was hurting...her boyfriend took her to the emergency room. When I came, I said "why", it's nothing...only baby moving. When she went to the doctor, they said the same thing...it's nothing."*

Another participant, who was homeless, shared that they go to the emergency room when an ambulance picks them up.

There was significant discussion about using the emergency room due to the constraints they feel financially or due to insurance coverage. Among the uninsured and underinsured there were many comments regarding the use of the emergency room: *"for me, everything"*, *"it is more reliable to go to the ER"*, *"all the time...when no coverage, all the time"* and *"when you are hurt or sick and something doesn't feel right... no choice when you don't have any money."*

Health System Questions

The next several questions focused on gleaning insight from the participants about the health system in the community.

STRENGTHS OF THE HEALTH CARE SYSTEM

The participants were asked, *“What do you feel are the strengths of the health care system in our community?”*

The responses were grouped into a few major themes. Many of the responses were centered on the quality of care provided including, getting good attention, being treated well and not experiencing discrimination (though this varied among participants). One participant shared insight on the system of care in Belle Glade; *“This is a small community...I give'em their props. There might be a lot of paperwork, but at least we have something. A lot of people don't have what we have, so we need to be thankful.”*

Other comments were centered on the services offered. The Health Department clinics were seen to be a strength of the system, *“If it wasn't for the health department and the health care system, I don't know what I would do. The people are nice...they take care of us...and with a smile.”*

The hospitals were also seen to be a strength of the system. *“Emergency room care is very effective, even if you are sick.”* The medical staff in the hospital (Belle Glade) were said to be nice and diligent, particularly since the hospital has changed.

One participant shared that they, *“appreciate that Palm Beach County in particular, really, really helps pregnant women.”*

The Health Care District was noted to help a lot of people, specifically, one participant commented, *“it boils down to Health Care District.”*

Participants also spoke positively of the support offered at faith-based facilities, such as Father Mike at St. George's.

Another comment was, *“Our strength is that it is confidential.”*

Other participants discussed that a strength of the system is the access for everyone and that services will be offered regardless of whether or not you can pay. This sentiment however, was not shared by all participants.

Some participants from the senior group commented that they have Medicare along with either BCBS or Humana and *“don't have any problems.”*

Some participants reported experiences with the health care system that were poor. *“I don’t think the system is very good....it could use an overhaul.”* There was discussion of discrimination, particularly for individuals who are undocumented. Two individuals shared their experiences of going to hospital emergency rooms because they were experiencing labor pains and reportedly were not given priority and forced to wait, despite other patients being seen before them. Both women reported that the babies died at birth due to complications and attributed this to the time it took for them to receive medical care.

BARRIERS TO ACCESSING CARE

Participants were asked, *“What barriers (difficulties/challenges) have you faced e.g., transportation, lack of insurance, scheduling, etc. accessing healthcare in our community?”*

The participants’ responses centered on a few major themes. The first was around cost. There was discussion about health insurance being too expensive and having expensive co-pays. There was also discussion about the challenges presented by health insurance. One participant asked, *“Why am I getting a bill when they know I cannot afford it?”*

Participants discussed not being eligible for certain services because they did not have “the right insurance”, specifically there was mention of not being able to get speech therapy because they were no longer on Medicaid. Some participants felt that doctors will decide whether or not to do surgery based on an individual’s coverage. Furthermore, it was stated that *“trying to get insurance benefits is a horrible experience”*, specifically, that it takes months to apply and a get approved. Participants discussed the challenges of not being approved for coverage for more than 6 months. They also noted over and over the high share of cost associated with the Medically Needy program. Additionally, it was mentioned that it *“seems like you only get coverage as an adult if you are pregnant.”*

Language barriers were discussed and people mentioned the need for Spanish-speaking staff and providers in clinics, doctor’s offices and in hospitals. Immigration status was also noted to be a barrier in accessing health care in the community. Specifically, there were some services that the undocumented population cannot access.

Challenges and barriers due to transportation were often discussed. The expense of bus fare, \$3-\$4 per ride was mentioned, and included comments such as *“everyone does not have money to get on the bus.”* There was discussion in one focus group about the cost of a monthly bus pass being \$50-\$60 but with a food stamp card it is \$10. The focus group in Belle Glade had follow-up discussions about a fairly new initiative of the city – bus transportation which costs \$.25 per ride, though participants did note that the routes are limited. The lead time needed to schedule a ride on Medicaid transport, up to 48 hours, was reported by some individuals while others were never able to access the transportation. Some groups however, expressed that transportation was not a barrier due to the public transportation services.

Individuals communicated that a barrier to accessing care was insufficient knowledge of the resources available in the community. One individual shared the suggestion that there should be more of a focus on education the public how to use the system, specifically the steps involved in using the system in an effort to eliminate clogs in the system.

Other comments included that there is too much paperwork and *“too much hassle...they give you a hard time. You go to a place...and you clearly need help, they look at you like you’re crazy like they don’t want to help you.”* One individual conveyed the challenges they had experienced because they did not have proper identification and shared that showing their social security card had not sufficed. Participants also expressed frustration with the automated systems when applying for care and not being able to speak to a human.

The long wait time associated with accessing health care in the community was discussed and one participant shared that they had waited 3 hours to get their blood drawn.

Another theme that surfaced was barriers around hours of operation and scheduling. There was discussion about the usual hours of 8am-5pm for many doctor's offices and clinics offering no consideration for workers who have to take off work, with or without pay to go to appointments. The senior groups discussed frustration with block scheduling and that, *"they think older people don't have anything to do so they can wait."*

SUFFICIENT AND INSUFFICIENT SERVICES

Participants were asked, “*What services are sufficient?*” and “*What services do you feel are insufficient?*”

The responses to this set of questions primarily focused on the latter question about insufficient services, though there were a few comments in relation to sufficient services; “*the kids are covered, the kids are good, the kids get everything.*”

While they seemed to feel that most services were sufficient, the seniors did mention a few services that they felt were lacking: coverage for hearing aids, dentures and vision care.

The lack of accessible and affordable dental care was mentioned repeatedly. Among the concerns noted were: the lack of preventive services and the lack of oral surgeons and orthodontic care. As one individual put it, “*why won’t they help you get a smile on you?*”

Other insufficient services mentioned included speech therapy, dermatology and ophthalmology.

There was discussion, particularly among the homeless population, about the need for more shelters and the need for more places for them to shower.

Respondents felt that services for individuals with pre-existing conditions are insufficient and they felt that many physicians did not want to bother. One participant commented, “*You shouldn’t be punished for something you have contracted or that you have.*”

Insufficiencies were also noted around providers and provider locations. Respondents expressed interest in having more free clinics and for more providers that would see people who don’t have insurance. It was noted that the free clinics are located downtown, and often people can’t get to them. It was suggested that locations where one can go to get “*medicine and shots*” be spread throughout the county.

Individuals also experienced difficulties seeing specialists, “*I thought I had really good health coverage and then I had trouble when I need to see a specialist...*”

Also, there was also discussion about doctors being busy and not taking sufficient time with patients. “*The doctors are so busy because they want the money that they don’t take the time with you...to answer your questions and talk...*”

Participants voiced that frustrations related to finances and health insurance. “*They need to help people like me who don’t have income, unemployed.*” One respondent commented, “*it’s bad if you find a job, it’s bad if you don’t. I don’t blame people who don’t want to find a job.*” It was stated that with Medically Needy, “*you may as well have no insurance.*”

Other participants discussed being dropped from coverage and not being sure why and another discussed that challenges they face because each of their kids have different coverage.

QUALITY OF CARE AND SERVICES

Focus group participants were asked *“How would you describe the quality of care and services you receive?”*

There were varied responses to this question. Participants expressed that the quality of care was highly dependent on the doctors and staff. A participant remarked *“On a scale of 100, I give them between a 55 and 60. They could do better.”* One individual reported, *“my doctor is good, but the staff [expletive].”* Another reported *“I have no problems with my doctor...I love him!”* One respondent spoke of the positive personal interaction with their doctor, *“When they do a test on you, my doctor calls me with the results himself”* and another, *“the care is great! I have no problems. If I call, they get right back with me.”*

Participants noted that while the services may be good, if a person does not have health insurance, it was impossible to buy medications.

In the Belle Glade focus group the following was expressed, *“It’s harder for men to get treatment out here than for women. I guess they feel like we’re supposed to be able to do it ourselves... even though there are no jobs out here. It’s more difficult.”*

There was discussion about fear of going to the doctor and to the hospital due to the resulting medical bills. Participants reported that information is sent to a collection agency and to the credit bureaus when people are unable to pay.

Participants in some group recognized the role the individual plays in getting quality health care, *“being honest will help you get good services”* and another, *“I report every little thing to my doctor that his staff does to me. I let the doctor know when there is a problem.”*

There were questions about why doctors and providers cannot communicate with each other and why it is left to the patient to obtain records.

PROVIDER / STAKEHOLDER SURVEY

In addition to gathering data through focus groups with members of the community, the Community Perspective component of the Community Health Assessment utilized a survey of providers and stakeholders in the community to glean their insight.

Provider/Stakeholder Survey – Methodology

In July and August 2012 the Health Council of Southeast Florida conducted an online survey with providers and stakeholders in the community. The survey consisted of 25 questions, related to the health system, health needs in the community, identification of vulnerable populations, service needs of clients and patients, perspectives on health issues in the community, and barriers to accessing care for the individuals they serve, and a demographic overview of the respondents.

The survey link was disseminated to recipients via email and the survey was accessible and able to be completed online using SurveyMonkey, a web-based survey tool. Accompanying the link that was sent to potential respondents was a brief blurb explaining the purpose of the survey, assuring anonymity of individual responses, and noting the estimated time for completion. The initial email link was sent to 119 individuals. This distribution list was compiled with the intent to be representative of individuals working in health and human services in the community as well as key stakeholders in the local public health system. The survey was available for completion for a total of 11 days. The goal was a response rate of 30% of recipients or a total of 30 completed surveys. Forty individuals started the survey and 36 completed the survey.

Figure 30: Provider Stakeholder Survey - Organization Type

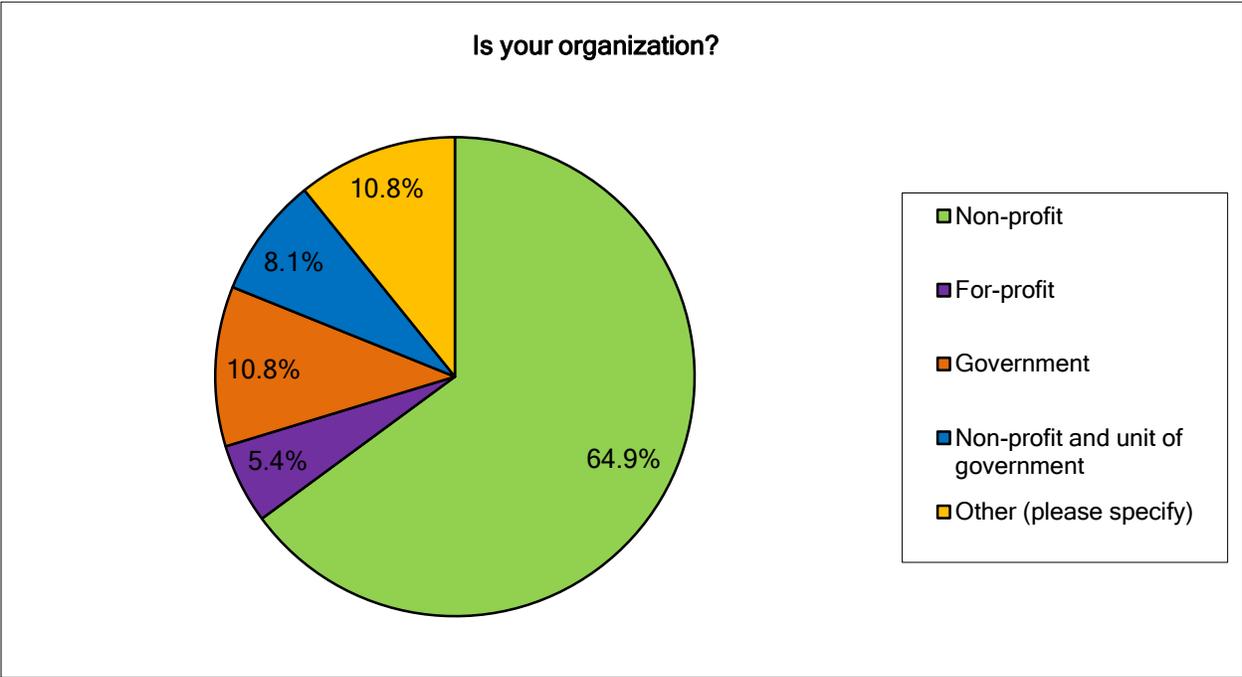

Figure 31: Provider Stakeholder Survey - Agency Services

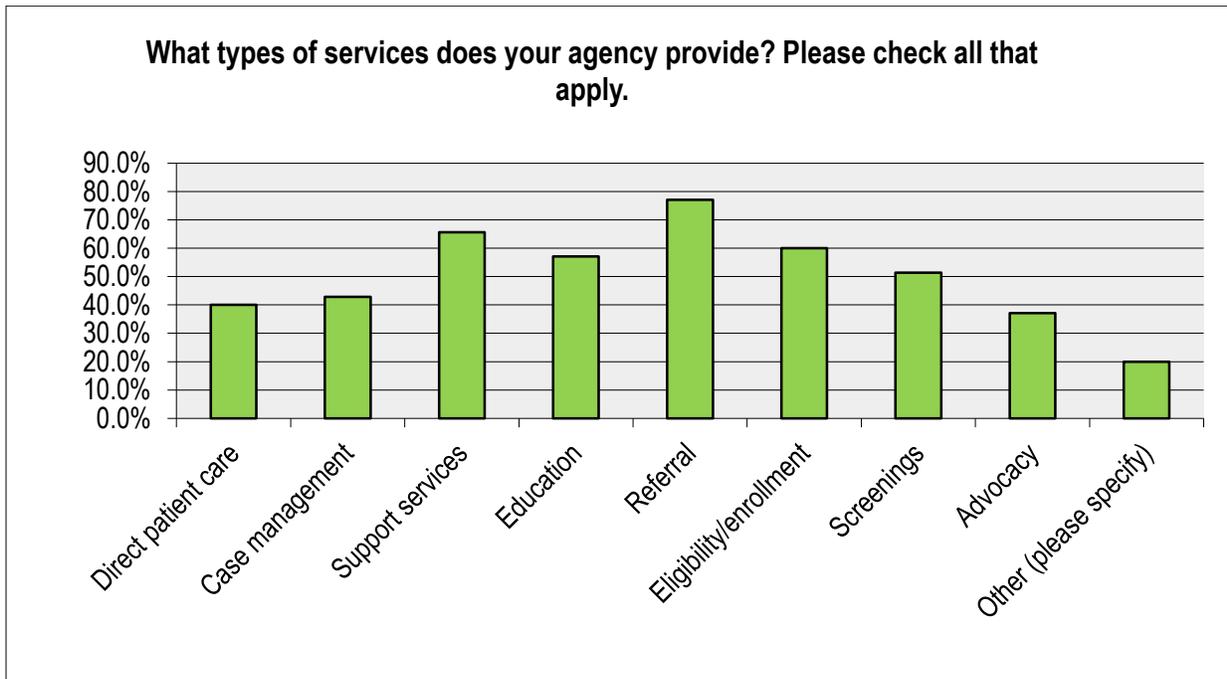

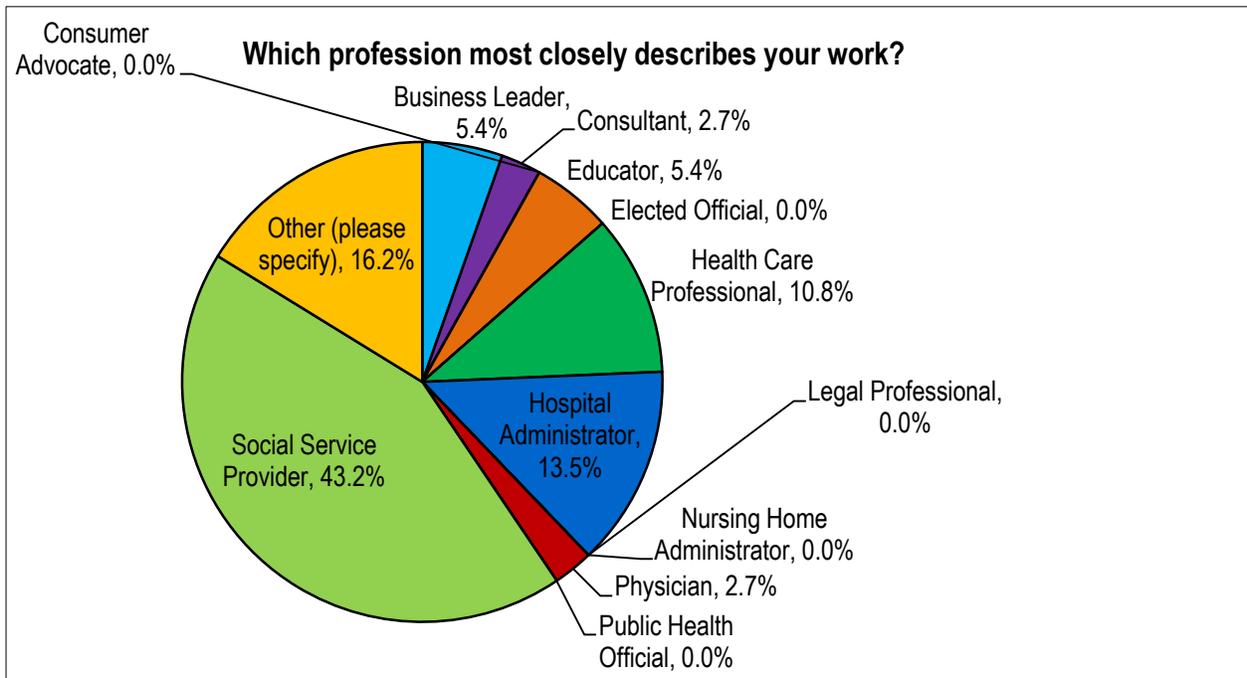

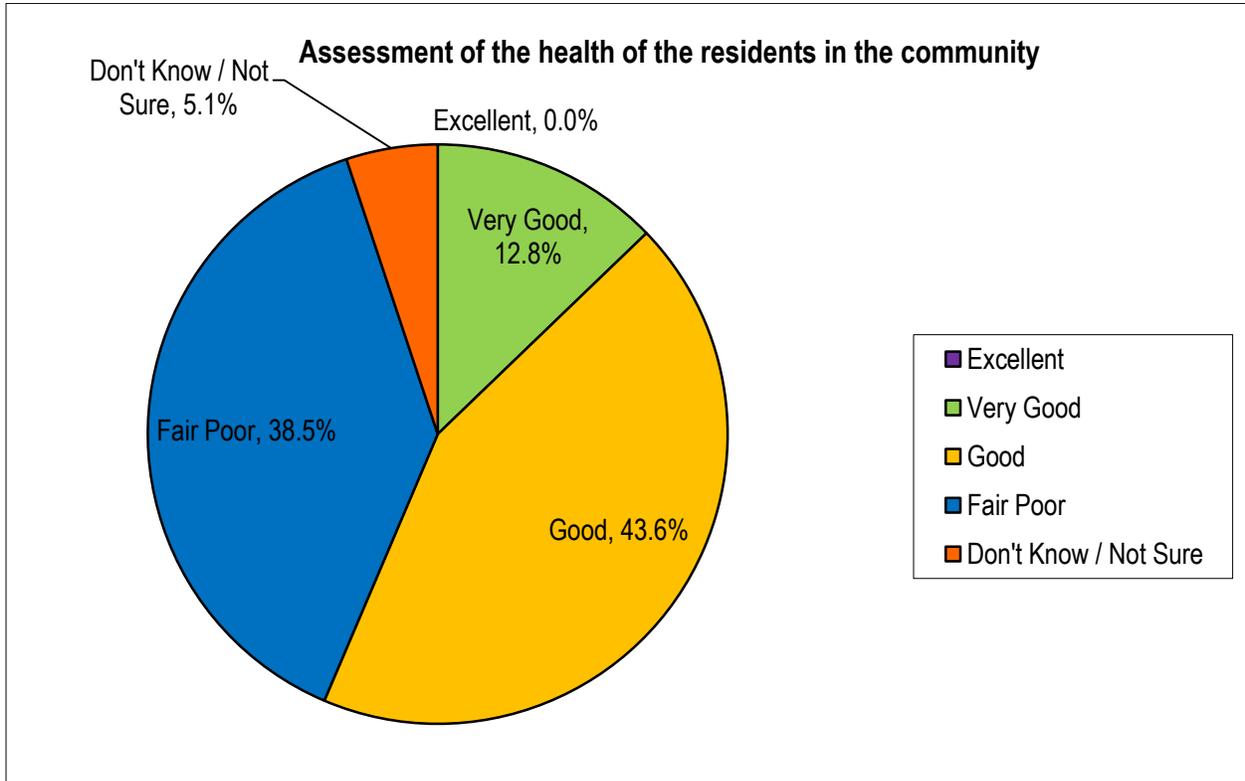

Figure 32: Provider Stakeholder Survey - Respondent Profession

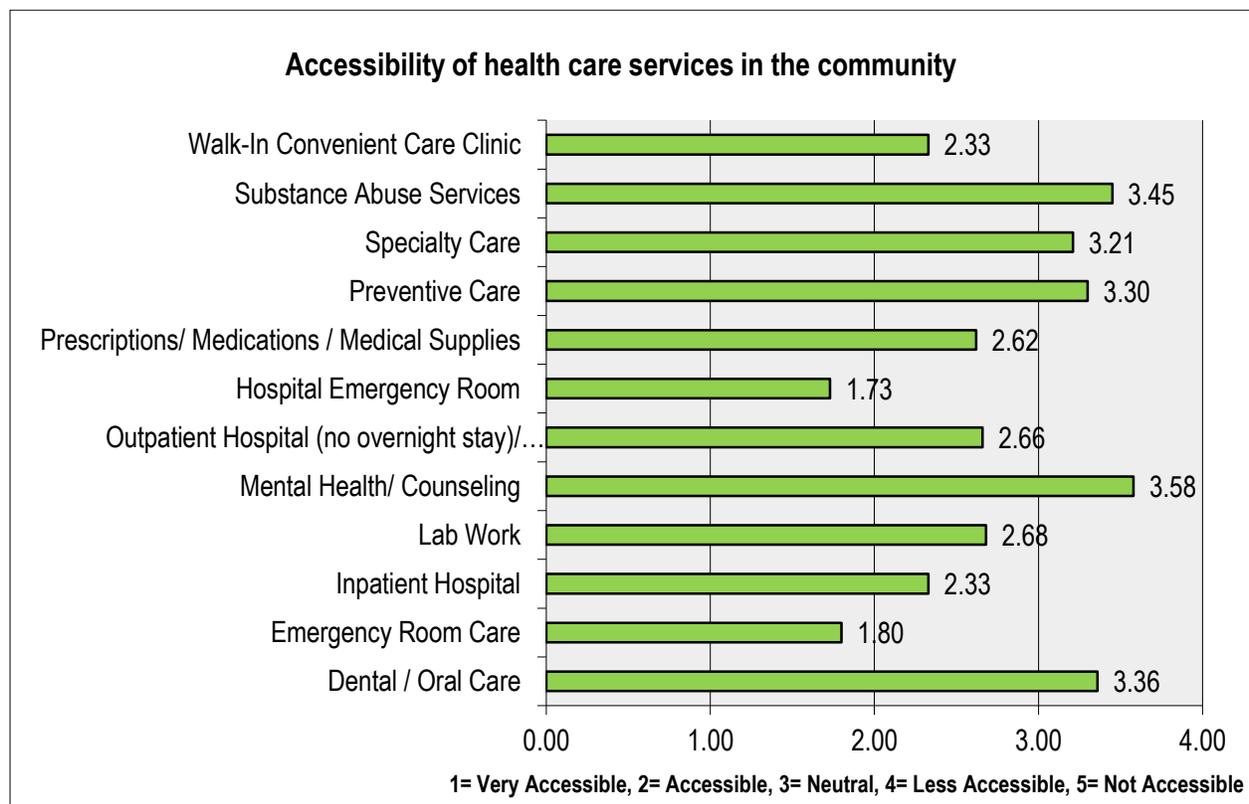

The first question in the survey asked respondents, “What is your overall assessment of the health of residents in your community?”

Thirty-nine respondents answered the question. Five or 12.8% said ‘very good’, 17 or 43.6% said ‘good’, 15 or 38.5% said ‘fair/poor’ and 2 or 5.1% said ‘don’t know/not sure.’

The next question asked respondents, “How accessible are the following types of health care services in your community? Please take into consideration all segments of the population.”

Forty individual answered this question. The graph of results is shown below. The lower the score, the more accessible the service was perceived to be. Among the services provided, ‘hospital emergency room’ received the lowest average score, meaning it was thought to be the most accessible. ‘Mental health counseling’ received the highest score indicating it was thought to be the least accessible.

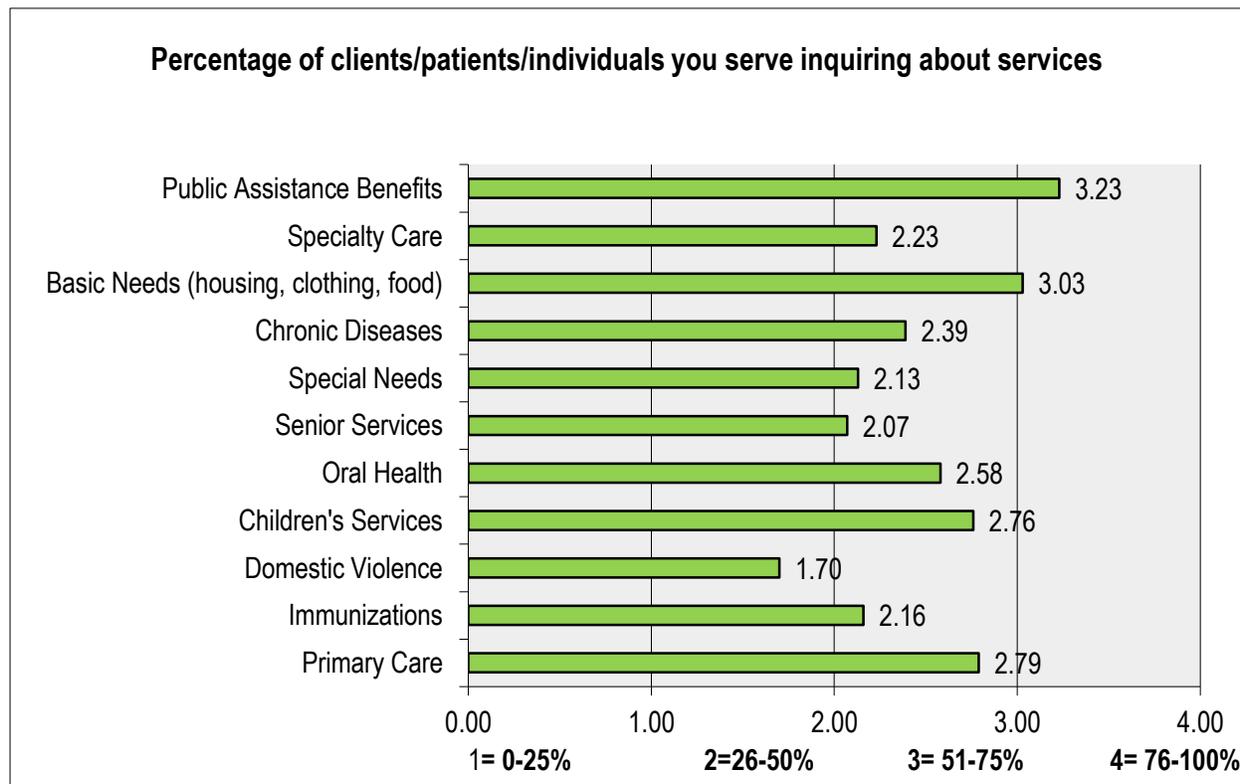

Respondents were asked, “In your opinion, what are the top *THREE* barriers that create difficulties in accessing health care in the community? Please rank the top 3.”

Thirty-nine respondents completed the question. The top three responses were: ‘health care service costs are too high’, followed by, ‘insurance cost is too high’ and then by ‘lack of knowledge about available services’.

Barriers to Accessing Health Care	Rank
Health care service costs are too high	Rank 1
Lack of cultural sensitivity/competency by providers	
Insufficient number of providers	
Lack of geographic access/ transportation	
Insurance cost is too high	Rank 2
Lack of knowledge about available services	Rank 3
Lack of quality care	
Lack of weekend/evening hours	
Lack of service availability	
Long waits for appointments	
Language barriers	
Long waits for treatment in the waiting room	
Don't know/not sure	
I don't think there are any barriers	

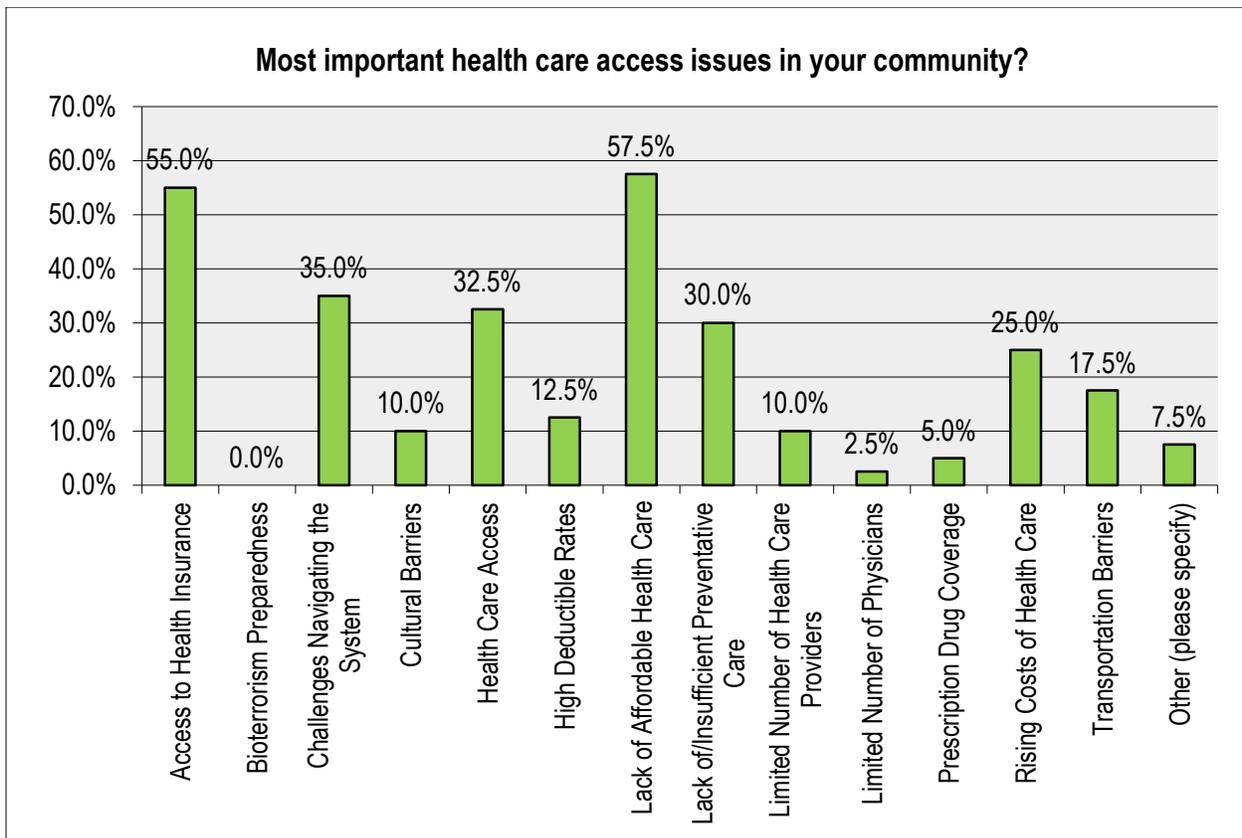

Survey respondents were asked, “What percentage of your clients/patients/individuals you serve inquire about services such as.”

Thirty-nine respondents completed the question. The highest scores were for ‘public assistance benefits’ followed by ‘basic needs (housing, clothing, food)’.

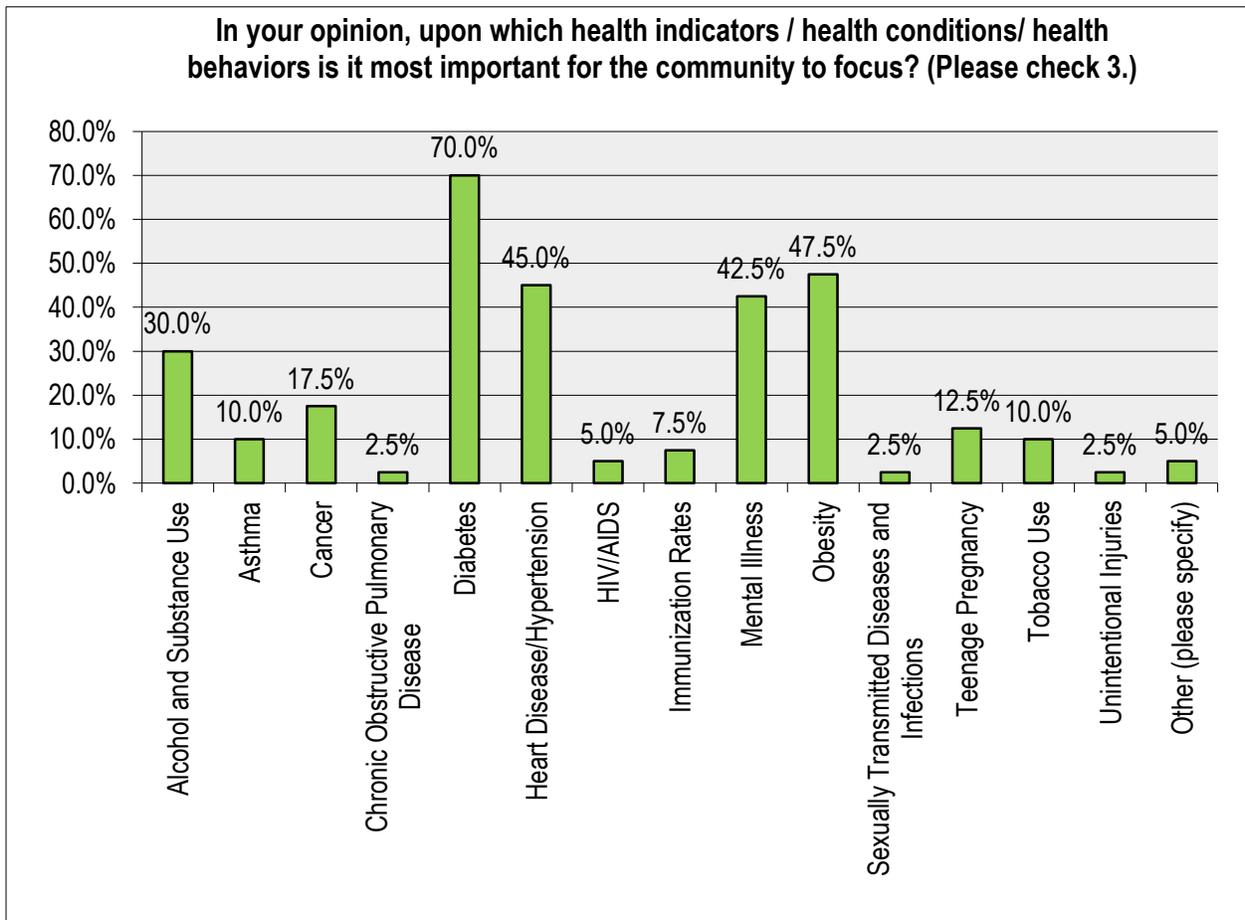

Respondents were asked, “In your opinion, what are the *THREE* most important health care access issues in your community?”

Forty respondents answered the question. ‘Lack of affordable health care’ was the most frequently selected and was among the top three for 57.5% of participants followed by ‘access to health insurance’ which was selected by 55% of respondents.

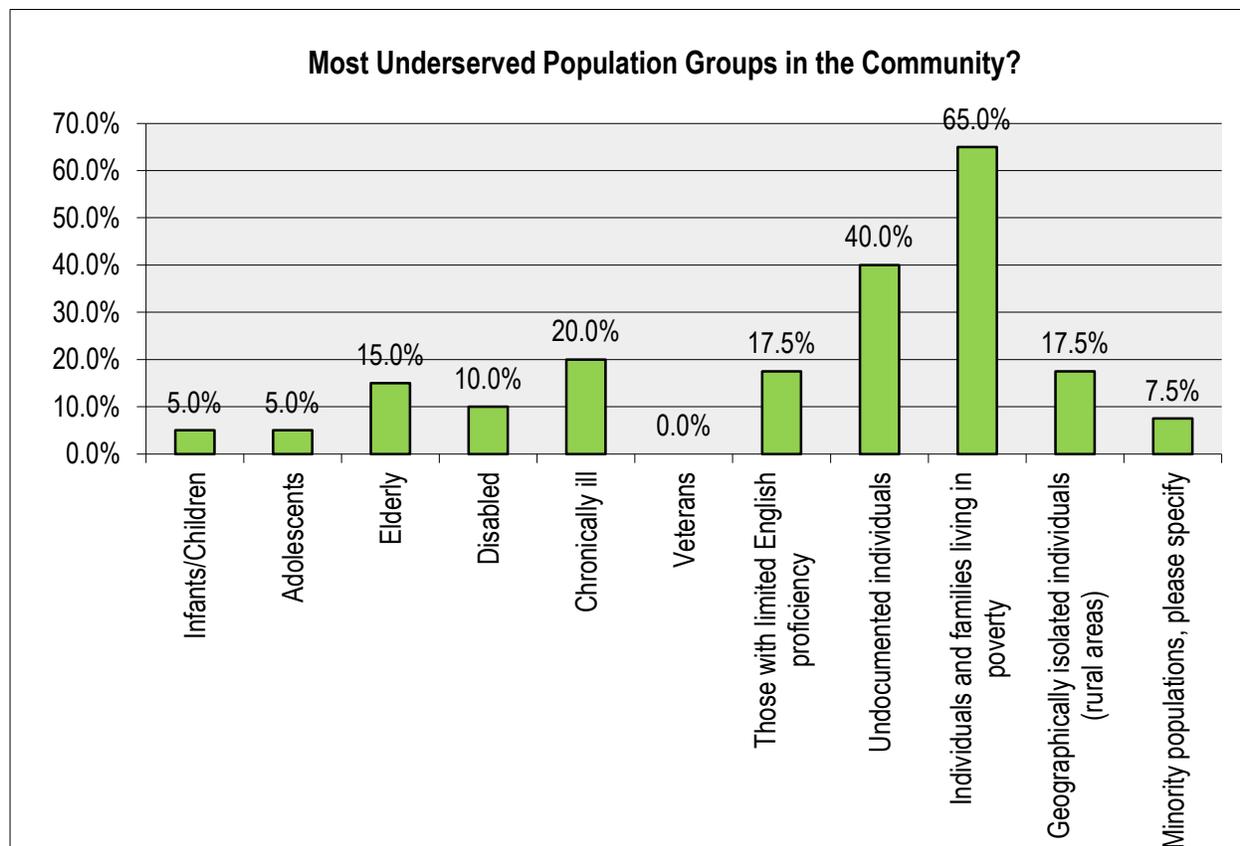

The next question asked, “In your opinion, upon which health indicators / health conditions/ health behaviors is it most important for the community to focus? (Please check 3.)”

Forty respondents answered the question. ‘Diabetes’ was the most frequently selected, with 70% of respondents choosing it, followed by ‘obesity’ (47.5%) ‘heart disease/hypertension’ (45%) and ‘mental illness’ (42.5%).

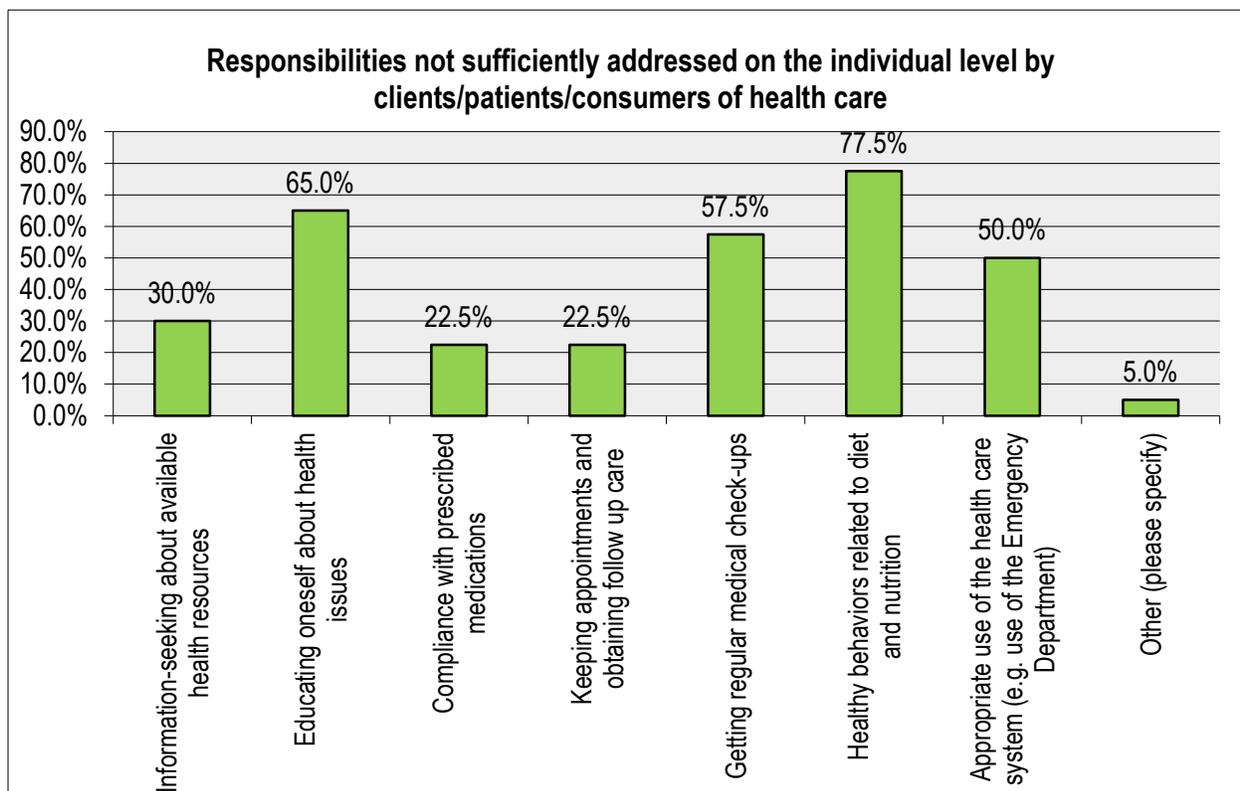

The next question asked respondents, “In your opinion, which TWO population groups are the most underserved in the community?”

Forty respondents answered the question. ‘Individuals and families living in poverty’ was the most frequently selected response with 65% choosing it, followed by ‘undocumented individuals’ which was selected by 40% of respondents. Twenty percent identified the ‘chronically ill’ as an underserved population.

The next question was related to self-accountability on the part of the client/patient/consumer of health care.

Forty respondents answered the question. Respondents were asked, “In your opinion, what responsibilities, related to one’s own health and health care, are not sufficiently addressed on the individual level (by clients/patients/consumers of health care)?” The most frequently selected response was ‘healthy behaviors related to diet and nutrition’ (77.5%) followed by ‘educating oneself about health issues’ (65%).

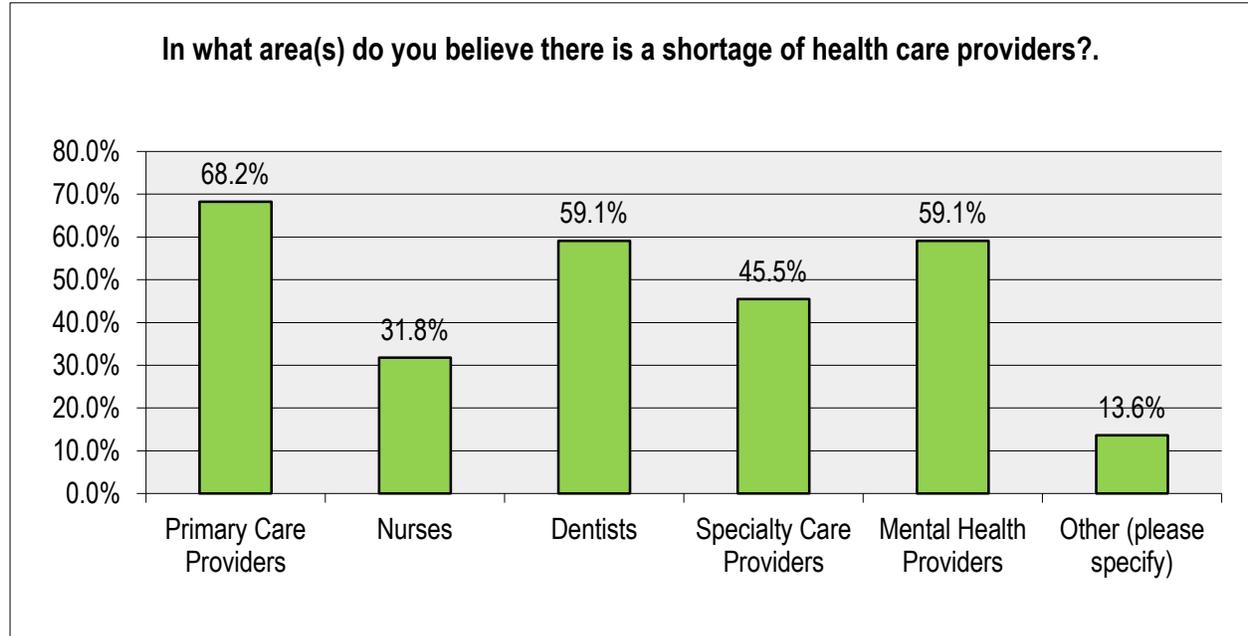

The next question asked, “Do you think that your community is experiencing shortages in the number and availability of health care providers?”

Forty respondents answered, of those 24 or 60% answered ‘Yes’. Those 24 were then asked, “In what area(s) do you believe there is a shortage of health care providers? Please check all that apply.” ‘Primary care providers’ were the most frequently indicated followed by ‘dentists’ and ‘mental health providers’.

Is the community experiencing shortages in the number and availability of health care providers?

In what area(s) do you believe there is a shortage of health care providers?.

OPEN-ENDED QUESTIONS.³⁸

Respondents were asked, “*What do you consider to be the community's strengths in providing health and human services?*” A few themes emerged from the responses given.

There were a series of comments about resources including: the availability of resources (hospitals, mental health clinics, rehabilitation services), Caridad Center, the FQHC's and the local Health Departments. Additionally, the creation and maintenance of community health centers with comprehensive health services (including program screening and navigation support) and the Health Care District (county health insurance) were noted. Another recognized strength was that there are many agencies and adequate tax dollars, if coordinated and prioritized appropriately.

The second theme that emerged was around the human resources. One respondent indicated that “service agencies have truly caring hearts behind their desks and phones.” Bilingual staff was reported as a strength.

The third theme that emerged was around the health care system and network. One noted strength was “a well-educated and knowledgeable health system that has the time to link families with the appropriate and effective provider.”

Other comments focused on the network of providers, the network of committed professionals that communicate and are trying to do good and collaborative partnerships. Being able to communicate through the faith-based community was noted as a strength in the community. And finally, the willingness of the community to “try new things” was seen as a strength.

The next question asked respondents to “*Please describe any gaps in the community's health and human service delivery system.*”³⁸

Several of the comments centered on access and often times specifically on the cost of care. There were responses about the gaps in the system related to needing more access for the poor, the ability to easily access health care without the worry of payment, the inability of people to access primary care without using the emergency room, the lack of access for those in poverty, undocumented and/or geographically isolated and the adult population who cannot afford health insurance and have no access to health care.

Lack of adequate public transportation was also noted as “a tremendous issue.”

Other responses included: needing opportunities for the underinsured or uninsured populations to access services and that there were not “enough service centers.”

Parents who are undocumented and who do not have access to healthcare (unless they pay out-of-pocket) were identified as a gap in the system.

³⁸ The tense, format and wording of the responses remain largely unchanged from their input into the survey tool. If changes have been made it was for purposes of improving the readability of the narrative.

Other gaps that were conveyed were around services: dental care for uninsured and [those on] Medicaid; the lack of cancer services for the financially disadvantaged; the availability of Health Department services; men's health services; and assistance for homeless children (specifically, the provision of immunizations so they can attend school); and day care service sites for Alzheimer's patients.

Gaps related to providers included: lack of Medicaid providers; not enough nurses who can work in the community with Alzheimer's families; and lack of cultural competency among the providers.

Identified gaps related to the system included: the inadequacy of the system to connect families to adequate and affordable health care; the communication on current programs and level of funding available for services; lacking partnerships and fragmented services, which in many cases don't address the need. The lack of resources and the need for more collaboration between public and private providers were also noted.

Insufficient knowledge was acknowledged as a gap in the system: lack of knowledge about the system on the part of clients, i.e. health literacy; lack of understanding about different "layers" or options for health care; and the challenges for families [in understanding] the options and services within the Medicaid and Medicare systems were noted.

The repetitive paperwork was noted as "a challenge."

Respondents were asked to, *"Please share any other comments you have that might assist efforts to improve the community's health and human service delivery system."*³⁸

Related to coverage and cost, one suggestion was to "increase the number of insured patients by decreasing cost of insurance and services."

Several of the suggestions related to the expansion of services, specifically to increase the number of preventive health care centers; to expand services to include eye care, nutrition and meal preparation, exercise and medication; and to create more access and more affordable healthcare services to include at least an annual check-up.

Another recommendation was to improve transportation services for homeless and elderly [so they are able to access services].

It was noted that the Lewis facility in West Palm Beach is a new and valuable resource for the homeless population.

Other recommendations focused on education and increasing knowledge. It was noted that families must be educated on the available services in the community that can be accessed. Another suggestion was to have a lead group to help with health education not limited to the basic services, but on all aspects of health.

Another recommendation was to assist health care community based service providers to be more accessible and effective with their communications systems.

A few recommendations mentioned program and policy related topics. One comment indicated that school lunches need improvement and another noted pedestrian safety.

CONCLUSION

The data from the Community Health Perspective should be considered along with the quantitative data from the Community Health Profile to help inform priority identification, strategy determination and action plan development in an effort to achieve the overarching goal of improving the health status of the community.

Appendix A

Income/Earning Terms and Definitions

(2010 Subject Definition, American Community Survey).

Total income is the sum of the amounts reported separately for wage or salary income; net self-employment income; interest, dividends, or net rental or royalty income or income from estates and trusts; Social Security or Railroad Retirement income; Supplemental Security Income (SSI); public assistance or welfare payments; retirement, survivor, or disability pensions; and all other income.

Receipts from the following sources are not included as income: capital gains, money received from the sale of property (unless the recipient was engaged in the business of selling such property); the value of income “in kind” from food stamps, public housing subsidies, medical care, employer contributions for individuals, etc.; withdrawal of bank deposits; money borrowed; tax refunds; exchange of money between relatives living in the same household; gifts and lump-sum inheritances, insurance payments, and other types of lump-sum receipts.

Income Type in the Past 12 Months

The eight types of income reported in the American Community Survey are defined as follows:

1. Wage or salary income: Wage or salary income includes total money earnings received for work performed as an employee during the past 12 months. It includes wages, salary, Armed Forces pay, commissions, tips, piece-rate payments, and cash bonuses earned before deductions were made for taxes, bonds, pensions, union dues, etc.

2. Self-employment income: Self-employment income includes both farm and non-farm self-employment income.

Farm self-employment income includes net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his or her own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, government farm programs, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc. Operating expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, rent, interest on farm mortgages, farm building repairs, farm taxes (not state and federal personal income taxes), etc. The value of fuel, food, or other farm products used for family living is not included as part of net income.

Non-farm self-employment income includes net money income (gross receipts minus expenses) from one’s own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc.

3. Interest, dividends, net rental income, royalty income, or income from estates and trusts: Interest, dividends, or net rental income includes interest on savings or bonds, dividends

from stockholdings or membership in associations, net income from rental of property to others and receipts from boarders or lodgers, net royalties, and periodic payments from an estate or trust fund.

4. Social Security income: Social Security income includes Social Security pensions and survivor benefits, permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance, and railroad retirement insurance checks from the U.S. government. Medicare reimbursements are not included.

5. Supplemental Security Income (SSI): Supplemental Security Income (SSI) is a nationwide U.S. assistance program administered by the Social Security Administration that guarantees a minimum level of income for needy aged, blind, or disabled individuals.

6. Public assistance income: Public assistance income includes general assistance and Temporary Assistance to Needy Families (TANF). Separate payments received for hospital or other medical care (vendor payments) are excluded. This does not include Supplemental Security Income (SSI) or noncash benefits such as Food Stamps. The terms “public assistance income” and “cash public assistance” are used interchangeably.

7. Retirement, survivor, or disability income: Retirement income includes: (1) retirement pensions and survivor benefits from a former employer; labor union; or federal, state, or local government; and the U.S. military; (2) disability income from companies or unions; federal, state, or local government; and the U.S. military; (3) periodic receipts from annuities and insurance; and (4) regular income from IRA and Keogh plans. This does not include Social Security income.

8. All other income: All other income includes unemployment compensation, worker’s compensation, Department of Veterans Affairs (VA) payments, alimony and child support, contributions received periodically from people not living in the household, military family allotments, and other kinds of periodic income other than earnings.

Income of Households: This includes the income of the householder and all other individuals 15 years old and over in the household, whether they are related to the householder or not. Because many households consist of only one person, average household income is usually less than average family income.

Income of Individuals: Income for individuals is obtained by summing the eight types of income for each person 15 years old and over. The characteristics of individuals are based on the time of interview even though the amounts are for the past 12 months.

Median Income: The median divides the income distribution into two equal parts: one-half of the cases falling below the median income and one-half above the median. For households and families, the median income is based on the distribution of the total number of households and families including those with no income. The median income for individuals is based on individuals 15 years old and over with income.

Aggregate Income: Aggregate income is the sum of all incomes for a particular universe.

Mean Income: Mean income is the amount obtained by dividing the aggregate income of a particular statistical universe by the number of units in that universe. For the various types of income, the means are based on households having those types of income.

Per Capita Income: Per capita income is the mean income computed for every man, woman, and child in a particular group including those living in group quarters. It is derived by dividing

the aggregate income of a particular group by the total population in that group. (2010 Subject Definition, American Community Survey)

Earnings: Earnings are defined as the sum of wage or salary income and net income from self-employment. "Earnings" represent the amount of income received regularly for people 16 years old and over before deductions for personal income taxes, Social Security, bond purchases, union dues, Medicare deductions, etc.

Median Earnings: The median divides the earnings distribution into two equal parts: one-half of the cases falling below the median and one-half above the median.

Aggregate Earnings: Aggregate earnings are the sum of wage/salary and net self-employment income for a particular universe of people 16 years old and over.

Mean Earnings: Mean earnings is calculated by dividing aggregate earnings by the population 16 years old and over with earnings.

Ranking System County Health Rankings

The *County Health Rankings* are based on a conceptual model of population health that includes both Health Outcomes (length and quality of life) and Health Factors (determinants of health). These Outcomes and Factors were broken down into a number of components, which were additionally broken down into subcomponents we call Focus Areas.

After developing the *Rankings* model, the next step in creating the *Rankings* was to establish weights for each component in the model and find appropriate measures. The process for choosing weights and measures was guided by

- Review of the literature around the impact of various factors on health outcomes
- Ability for factors to be modified through community action
- Review of America's Health Rankings methodology and indicators
- Availability and reliability of indicators at the county level throughout the nation
- Analysis
- Feedback from a panel of technical experts

The Rankings are based on summary composite scores calculated from the individual measures. We calculate and rank eight different summary composites:

1. **Overall Health Outcomes**
2. Health Outcomes – **Mortality**
3. Health Outcomes – **Morbidity**
4. **Overall Health Factors**
5. Health Factors – **Health behaviors**
6. Health Factors – **Clinical care**
7. Health Factors – **Social and economic factors**
8. Health Factors – **Physical environment**

The overall Health Outcomes summary score is a weighted composite of Mortality (50%) and Morbidity (50%). The overall Health Factors summary score is a weighted composite of four

components: Health behaviors (30%), Clinical care (20%), Social and economic factors (40%), and Physical environment (10%). Note that the component weights add to 100%.

We would like to emphasize that there is no one "correct" formula or "true" set of weights that perfectly represents the health of a community. Indeed, even a very good system by today's standards might not perform well over long periods of time or under all possible circumstances. *County Health Rankings* staff have used information from a wide variety of sources--scientific research, available data, expert opinion, statistical analysis--to arrive at a set of easy to understand weights that reasonably reflect the different components and determinants of health. Of course, they are not perfect, but we stand by them as reasonable estimates supported by the best available evidence balanced with the availability of health data and interpretability.

Health Outcome Summary Score

To calculate the summary score for Health Outcomes, we combined scores for Mortality (50%) and Morbidity (50%) to produce 100% of the Health Outcomes summary score. The weights for specific measures were assigned based on relative importance within the factor and considerations of data reliability and availability. Within morbidity, we assign a higher weight to the low birthweight measure since this measure is based on a census of all live births whereas the other measures are based on a survey of a sample of the population.

Table 157: Health Outcome Weights for the 2011 County Health Rankings

Outcome	Focus Area	Measure
Mortality (50%)	Premature death	Years of potential life lost before age 75 (50%)
Morbidity (50%)	Quality of life	Percent reporting poor or fair health (10%)
		Physically unhealthy days (10%)
		Mentally unhealthy days (10%)
	Poor birth outcomes	Low birthweight live births (20%)

Health Factors Summary Score

To calculate the summary score of health factors, weights were determined for each of the four major factors (Health behaviors, Clinical care, Social and economic factors, and the Physical environment) based on a review of the literature, expert opinion, and data analysis. Additional information is available about the methods used to determine these weights (*Working Paper on Assigning Determinant Weights*). The following weights were used to calculate the overall Health Factors summary score: Health behaviors (30%), Clinical care (20%), Social and economic factors (40%), and the Physical environment (10%). Like the Health Outcomes summary score, weights at each level sum to 100%.

The weights for specific measures were assigned based on relative importance within the factor and considerations of data reliability and availability. A table presenting the weights follows.

Table 158: Health Factor Weights for the 2011 County Health Rankings

Health Factor	Focus Area	Measure
Health behaviors (30%)	Smoking (10%)	Adult smoking rate (10%)
	Diet and exercise (10%)	Adult obesity rate (10%)
	Alcohol use (5%)	Excessive drinking (2.5%)
		Motor vehicle crash death rate (2.5%)
Unsafe sex (5%)	Sexually transmitted infection rate (2.5%)	
	Teen birth rate (2.5%)	
Clinical care (20%)	Access to care (10%)	Adult uninsured rate (5%)
		Primary care providers (5%)
	Quality of care (10%)	Hospitalization rates for ambulatory-sensitive conditions (5%)
		Diabetic screening rate (2.5%)
		Mammography screening rate (2.5%)
Social and economic factors (40%)	Education (10%)	High school graduation rate (5%)
		Adults with college degrees (5%)
	Employment (10%)	Unemployment rate (10%)
	Income (10%)	Children in poverty (10%)
	Family and social support (5%)	Social and emotional support (2.5%)
		Single-parent households (2.5%)
	Community safety (5%)	Violent crime or homicide rate (5%)
Physical environment (10%)	Environmental quality (5%)	Unhealthy air quality due to particulate matter (2.5%)
		Unhealthy air quality due to ozone (2.5%)
	Built environment (5%)	Access to healthy foods (2.5%)
		Access to recreational facilities (2.5%)

Appendix E

Palm Beach County Community Health Assessment - Community Focus Group Questions

Health Behavior / Health Attitude Questions

1. What does health mean to you?
2. What does unhealthy mean to you?
3. How do you take care of your health?
4. Who or what influences what you do about your health?
5. Who or what influences the way you think about health?
6. Where do you get health care?
 - a. Do you have a place where you usually receive care?
 - b. Where do you go to get physicals / check-ups?
 - c. In what cases do you use the emergency room?

Health System Questions

7. What do you feel are the strengths of the health care system in our community?
8. What barriers (difficulties/challenges) have you faced e.g., transportation, lack of insurance, scheduling, etc. accessing healthcare in our community?
9. What services are sufficient? What services do you feel are insufficient?
10. How would you describe the quality of care and services you receive?

Individual health is closely linked to community health -- the health of the community in which people live, work, and play. Likewise, community health is profoundly affected by the collective beliefs, attitudes, and behaviors of everyone who lives in the community.
